

Florida K-Readiness Rostering Options (Subject to Update & Revision)

2018–2019

- 1) **Student Rostering and Data Integration (SRDI) Service** – The SRDI service is being implemented for all Florida districts, which allows for nightly student data updates into each district’s Florida K-Readiness assessment Renaissance Place (RP) site. With the SRDI service in place, the update process will happen nightly, capturing any changes that might be made to student data in the district’s database.
- 2) **Roster Template** – Districts will still have the ability complete and submit the roster template provided by Renaissance for schools that may have separate data-handling provisions in the district’s PK-12 data reporting system (e.g., charter schools). The instructions for submitting the template are incorporated in the template document. Multiple templates can be submitted; however, it is highly recommended that districts submit one template. If districts submit subsequent templates, only new student enrollment information should be included. If districts discover that incorrect data was submitted for a student via the roster template, please contact FLKreadiness@Renaissance.com to resolve the issue.

Notes pertaining to all roster options:

- Please note that you will need to choose one rostersing option. If your district uses SRDI you will only be able to submit a roster template for schools not included in the SRDI data feed (e.g. charter schools that have separate data handling provisions in the district’s PK-12 data reporting system).
- It is a requirement to have a state-assigned FLEID number for each student.
- Renaissance will create one district administrator user and one school level administrator user for each school. Additional administrator users can be manually added by the district or school administrator users.
- If multiple roster templates are submitted, care should be taken to avoid duplicate or mismatched student accounts. Roster templates should only be used if schools’ (e.g., charter schools) information is handled separately from regular schools’ data in the district’s data management system.
- Beginning in 2018, Survey 8 is no longer used for FLKRS rostersing.
