DUE: August 1, 2020

Richard Corcoran
Commissioner Florida Department of Education

Dear Commissioner Corcoran:

This letter certifies that Alachua County Public Schools approved the district's Mental Health Assistance Allocation Plan on July 21, 2020, which outlines the local program and planned expenditures to establish or expand school-based mental health care consistent with the statutory requirements for the mental health assistance allocation in accordance with section 1011.62(16), Florida Statutes (see attached Mental Health Assistance Allocation Plan Checklist). This letter further certifies that legislative funding allocated to implement the district's plan does not supplant funds already allocated for school-based mental health services and the funds will not be used to increase salaries or provide bonuses. Alachua County Public Schools approved plan with expenditures and Mental Health Assistance Allocation Plan Checklist are attached.

Checklist District Mental Health Assistance Allocation Plan
Charter School Mental Health Assistance Allocation Plans
Mental Health Assistance Plan
Alachua County Public Schools
2020-2021

Delivers evidence-based, mental health assessment, diagnosis, intervention, treatment and recovery, through a multi-tiered system of supports.

The Alachua County School District currently uses a four-step problem-solving model within the Multi-Tiered Support System (MTSS) three-tier process to focus on awareness and prevention and to identify and address mental health issues in the schools. Tier-1 consists of classroom-based supports, to include an evidence-based Social Emotional Learning (SEL) curriculum that is employed across the district, teacher training (mental health awareness, suicide prevention and “Trauma Sensitive School” training), direct student training, employment of peer prevention programs, and classroom instruction by school counselors. Tier-2 supports are provided by school-based mental health professionals (including school counselors, social workers, and school psychologists), which include small-group and individual school counseling, individual and small-group behavior support interventions, and specialized group intervention programming provided by community agencies at middle schools. In addition, the district employs a number of social workers through federal and local grant funding that are assigned both to individual schools. These professionals provide additional Tier-2 and Tier-3 supports as well as assist in the referral process for additional Tier-3 resources. Tier 3 supports are provided to students who exhibit the greatest need. Tier-3 supports include individual counseling, referrals to outside agencies (mental health counseling and substance-abuse treatment) and, in some cases, school-based wrap-around services from contracted mental health providers. The district has sought to shore up and expand Tier-2 and Tier-3 supports, in particular, through the employment of additional certified school social workers and additional mental health specialists utilizing state mental health allocation funding in order to more effectively reach students with mental health needs or those at risk for developing mental health problems.

Focuses on evidence-based mental health services for students with one or more co-occurring mental health or substance abuse diagnoses and students at high risk of such diagnose.

Each school is required to submit a plan for implementation of Social Emotional Learning to ensure effective Tier-1 implementation. School-based Data Review and Student Services Teams at each school are provided training in MTSS strategies and the four-step problem-solving model in order to identify more effectively students at risk for mental health needs. School teams use Early Warning System data as well as teacher and staff observational data to determine effectively if students require Tier-2 or Tier-3 supports. Teacher data will include the SRSS (Student Risk Screening Scale). Individual Educational Planning teams review data, screening instrument results, and (if appropriate) gain parental consent for release of information and consent for agency referrals.

A school-based “case manager,” school counselor, or social worker may work with district staff to conduct screenings, complete a district referral, coordinate additional data gathering (as needed), and to assist in completing additional paperwork as needed for outside agency referrals. As described below, direct services to students are provided by agencies willing to provide contracted evidence-based mental health and substance abuse counseling and psychiatric services to students attending public schools. Students are referred to outside mental health professionals as appropriate. Additionally, school staff (school counselors and school psychologists) provide direct services to students in house that includes evidence-based programs and counseling techniques. District social workers are certified professionals and they, too, are utilized to provide evidence-based services directly to students who have been identified with needs.
Mental Health Assistance Plan
Alachua County Public Schools
2020-2021

Includes direct employment of school-based mental health services providers (i.e., school psychologists, school social workers, school counselors and other licensed mental health professionals) to reduce staff-to-student ratios and meet student mental health assistance needs.

Mental health concerns are often first noticed in the school setting. Recognizing this, the school district has responded by ensuring that every school has a dedicated school counselor (larger schools have more than one), by employing school psychologists to serve in clusters of schools, and by utilizing federal and local grant funding to employ social workers and mental health providers for high-need schools. Additionally, the district has determined to utilize State Mental Health Assistance Allocation (MHAA) funds to add social workers and mental health specialists to assist in identifying students with needs and to provide direct service.

Currently, the district employs two district-based mental health specialists (utilizing MHAA funds) to coordinate services at the district level among schools, to coordinate the partnerships and contracts with outside agencies and providers, to facilitate assistance to families in obtaining and accessing services, to coordinate and provide mental health training to staff, and to collect program outcome data necessary for reporting. These individuals are trained and credentialed social workers, mental health professionals, or certified school counselor specialists with knowledge of mental health and social work-related experience. Their duties include training of school-based teams on implementation of the MTSS problem-solving process related to mental health needs, training on Tier-2 and Tier-3 interventions, and training and support in appropriate mental health referrals. These employees also assist in evaluation of Tier-2 and Tier-3 support services in schools and further support appropriate implementation of evidence-based intervention strategies. They also support contracted service providers in providing individual and group counseling in schools. They monitor suicide risk assessment and threat assessments to ensure related mental health follow up is provided. Finally, the mental health specialists are YMHFA trainers and coordinate all district YMHFA and Kognito trainings in addition to and providing regular trainings to school staff.

In addition to the two mental health specialists, the district also employs (utilizing MHA and grant funds) ten certified social workers who are each assigned to a cluster of schools. School social workers develop and manage a caseload of students and families at each school they serve. Social workers provide Tier-2 and Tier-3 services through direct counseling to individual students and to small groups based on need and/or referral to outside agencies for counseling. They also help facilitate assistance to families in obtaining and accessing services, and they collect program outcome data necessary for reporting. Beginning in 2019, the district further expanded its cadre of social workers so that all schools in the district have an assigned social worker on a weekly basis. For 2020-2021, the district intends to further increase its cadre of social workers in order to provide increased social worker time at schools identified as higher need based on data collected during the 2019-2020 school year. The district also employs two licensed mental health professional to serve high-need students at our two district programs for students with emotional behavioral disabilities through federal and MHAA funds.

Additionally, the district facilitates a “System of Care” program that serves students at specific high-need schools. This program is supervised by a dedicated administrator, a group of dedicated social workers for each participating school, and contracted mental health specialists for each school. Costs for the contracted mental health professionals are paid through a locally funded grant initiative. The program is further supplemented with an additional mental health specialist and certified social workers (utilizing MHAA funds).
Mental Health Assistance Plan
Alachua County Public Schools
2020-2021

Identifies strategies to increase the amount of time student services personnel spend providing direct mental health services (e.g., review and revision of staffing allocations based on school or student mental health assistance needs).

Each year, school staffing ratios are reviewed and revised at the district level to assure that each school has personnel dedicated to identifying and working with students who exhibit a need for mental health services. All schools have at least one school counselor (larger schools have more than one) and access to a school psychologist. Currently, social workers are assigned to clusters of schools with the highest need. At this time, 31 district schools and charter schools participating in the district plan are served by social workers. In addition, 7 schools are served through the System of Care, which has a cadre of social workers and contracted mental health specialists dedicated to that program. As noted above, two district-based mental health specialists were hired (utilizing MHAA funds) to coordinate services at the district level among all schools.

While the district currently has contracts and agreements with collaborating agencies for the provision of mental health services, experience has shown that student mental health concerns are more quickly and efficiently addressed, in most cases, “in house” by district-employed mental health professionals. Beginning with the 2019-2020 school year, the district further supplemented its staff of professionals, utilizing MHAA funding in order to increase the number of staff providing direct identification and intervention services to students across the district. In order to increase the amount of time that school-based student services personnel spend providing direct services to students, the district hired additional district-based social workers to serve schools across the district with the goal that every school received the services of a social worker at least one day per week. In addition, at least one additional social worker was staffed full-time at one high-need elementary school. An additional mental health counselor was employed to provide Tier-3 supports at our district programs for students with emotional/behavioral disabilities so each program will be served by a full-time licensed mental health provider. The additional school based social workers and mental health providers worked with existing school social workers, district mental health specialists, school counselors, and school psychologist to provide direct services. Additional personnel resulted in a lower ratio of students to providers, thus increasing the amount of time each school-based student service person had to work directly with students.

Includes contracts or interagency agreements with local behavioral health providers or Community Action Team services to provide behavioral health services on or off the school campus (plan must specify the type of services that are provided in the agreement).

The district currently has partnerships, contracts, and memorandums of understanding with local agencies providing evidence-based mental health services both in schools as “wrap-around” services and off-site through appointment and special arrangement. These include partnerships with the University of Florida, Shands Teaching Hospital, as well as a number of other public and private mental health and substance-abuse agencies in the community. The district’s “System of Care” program is focused on high-need elementary schools, two middle schools, and one high school and is funded through local grant funding and the MHAA. This program features a mental health treatment option through contracted services and “in-house” mental health specialists.

A Request for Proposals was developed to expand existing partnerships to agencies willing to provide contracted evidence-based mental health and substance abuse counseling and psychiatric services to
students attending public schools. Emphasis was on securing services for students across all grade levels (PK-12). Services included individual, group, and family counseling; consultative services; substance-abuse counseling; evaluation and diagnosis; and data collection. The district employed providers willing to provide services regardless of insurance or Medicaid and funded services not covered through those means with Mental Health Allocation funding. Agencies initiated services in a timely manner (or within 2 weeks of referral). It is anticipated that additional contracts may be implemented for the 2020-2021 school year (using MHAA funds) in order to provide a higher level of services, including psychiatry services. Contracts are structured on a “fee-for-service” basis and services were coordinated with each agency to utilize Medicaid and insurance funding when available. In some instances, services were “in-house” as part of a wraparound mental health program at individual schools, but when outside clinical services are required, those options are included as a part of agency contracts.

State how the plan will establish school board policies and procedures that ensure for all schools, including charter schools, to ensure: (1) Students referred for a mental health screening are assessed within 15 days of referral; (2) School-based mental health services are initiated within 15 days of identification and assessment; and (3) Community-based mental health services for students are initiated within 30 days of referral.

As stated above, the school district has an existing procedure in place to ensure all students are assessed for mental health concerns as part of an ongoing process and, when identified, in a timely manner. School-based Student Services Teams at each school are trained in MTSS strategies and the problem-solving model in order to identify students at risk for mental health needs. School teams also use Early Warning System data as well as teacher and staff observational data to determine effectively if students require Tier-2 or Tier-3 supports. Beginning in 2020-2021 school year, all schools will implement a universal screener (SRSS) to identify students in need of services. For students identified as Tier-2 or Tier-3 candidates, school-based mental health professionals will determine which evidence based interventions would be most appropriate. Evidence-based intervention training and resources will be provided by the district mental health team. School and district staff assess each student within 15 days of identification. For students identified for school-based services, those services begin as soon as possible, but will begin no later than 15 days after assessment. Hiring of additional social workers will positively affect students by decreasing the number of days before school-based services can be initiated. Individual Educational Planning teams review data, screening instrument results, and (if appropriate) make a recommendation for community-based services. School staff works with the district mental health specialists to identify and arrange services and to gain parental consent for release of information and consent for agency referrals. Students receiving mental health contracted funds services will have service initiated within 30 days. The district developed a tracking procedure to document the referral, assessment, and treatment timeline.

Charter schools have the choice of writing their own Mental Health Plans (MHP) or participating in the district MHP. Charter schools participating in the district MHP are provided consultative services through the district student services department to determine student needs at each individual charter school. Mental health specialists and district social workers will be assigned to each participating charter school in order to provide services directly to students based on outcomes of needs assessment within the same time period as is provided to regular district school students. Charter school students identified for
community services at schools participating in the district MHP will be referred within 15 days, and costs for services will be paid from the district MHAA funding.

As required, the district MHP will be approved by the School Board prior to submittal to the state. District School Board policies are reviewed annually and any changes or additional policies that may be necessary due to legislation and this MHP will be recommended to the Board through the district staff attorney’s office.

Describes process for coordinating mental health services with a student’s primary mental health care provider and other mental health providers involved in the student’s care

School-based mental health staff and dedicated district mental health staff coordinate services with outside providers. Providers include contracted agencies and local partnerships as well as student primary care providers, when appropriate. Parents are consulted to determine the best option for each student. The district contracts with local providers in order to provide all students in need of services those services regardless of insurance or Medicaid. If parents prefer to use students’ primary or other mental health provider, those preferences are honored, and district mental health professionals (school counselors and social workers) work with parents to document those arrangements and collect relevant data needed for state reporting. Parents are asked to provide a release of information for the district to consult and coordinate services with all mental health providers. For those students in the System of Care, monthly reports are provided by the mental health provider to SOC staff.

Describe the process for coordinating mental health services for students at charter schools that are part of the district plan.

The district meets with each charter school annually to determine a service plan that is proportionate to need. Consultation is ongoing throughout the year if needed. Each charter school receives the services of a dedicated social worker who works with charter school staff to identify students in need of supports. The charter school social worker also provides Tier-2 and Tier-3 supports when needed to charter school students. Students needing referral to contracted providers are served on the same basis as students who attend the regular public schools. Charter school staff are invited to attend district trainings that involve mental health.

Identifies strategies to: (1) Improve the early identification of social, emotional or behavioral problems or substance abuse disorders; (2) Improve the provision of early intervention services; and (3) Assist students dealing with trauma and violence.

School teams are trained to identify social/emotional, behavioral or substance abuse disorders utilizing EWS data (attendance, behavior and change of grades). In addition, beginning in 2020-2021, all schools will be utilizing the SRSS (Student Risk Screening Survey) to identify students with both internalizing and externalizing behaviors and in need of additional supports.

School-based mental health staff provide early intervention through counseling and behavioral intervention strategies. District mental health specialists hired through MHAA funds provide training and
support in the identification and provision of interventions most appropriate based on student need. An increase in social workers will directly impact the number of students receiving intervention and the timeliness of implementation.

Schools receive training on mental health (Kognito/YMHFA) as well as training specific to trauma and creating trauma sensitive schools/classrooms. Deans/BRTs are trained in trauma sensitive and restorative practices in responding to behaviors of students who may have trauma history. In addition, school counselors/social workers receive training in trauma sensitive intervention. For the upcoming school year, in an effort to respond to students returning to school with a higher level of trauma, the district is purchasing the online Kognito Trauma Sensitive Practices training utilizing SEDNET funding for all school teachers and staff. Students with significant need may be referred for outside counseling to agencies specializing in working on students with trauma (Village Counseling Center, Child Advocacy Center, Meridian).

**EXPENDITURES**

**Number of school-based mental health providers funded by the allocation and licensure/certification for each.**

The district intends to hire five additional social workers (certified school social workers) and one System of Care administrator with MHAA funds. These positions will supplement three current mental health specialists and seven current school social workers paid with MHAA funds. All social workers are certified school Social workers. Mental health counselors are licensed mental health counselors or licensed social workers.

**Number of community-based mental health providers funded by the allocation and licensure for each.**

The district currently has contracted agreements/partnerships with two community mental health program agencies that are paid from MHAA funds. These providers are utilized when services required cannot be administered by school- or district-based mental health professionals and other funding is not available (i.e., Medicaid/insurance). These agencies are licensed mental health agencies and are staffed with professionals holding mental health licensure or registered interns supervised as required by state guidelines. For the 2020-2021 school year, the district anticipates adding a contract for psychiatry services.

**School district expenditures for services provided by contract-based collaborative efforts or partnerships with community mental health program agencies or providers.**

Currently, the district contracts with Village Counseling Center, Meridian Behavioral Health, and Step by Step Behavioral Health for mental health counselors at district schools. These costs are paid from locally sourced grants and MHAA funds. The district also has multiple partnerships and agreements with local agencies who provide mental health programming at no cost to the district. These include agreements with Children’s Home Society, UF Health, Alachua County Crisis Center, Meridian Behavioral Health, and other counseling providers.
Mental Health Assistance Plan
Alachua County Public Schools
2020-2021

Other expenditures (specify type and amount)

In addition to the mental health services and training provided through the MHAA funding, the district provides training, social workers, and mental health contracted services through district funding and through a number of local and federal grant programs. Currently, the district operates a “System of Care” program that serves students at four high-need elementary and middle schools. This program includes a contracted mental health specialist for each participating elementary school. Costs for the mental health professionals are paid through a locally funded grant initiative.

Since its inception, the district has also dedicated a portion of its Title IV Student Support and Academic Enrichment (SSAE) grant to provide supplemental district based social workers to high need schools and to fund training to teachers and school staff in methods and techniques for identifying and improving mental health issues, behavioral health problems, and substance abuse.

The district intends to use MHAA funds to supplement existing programs designed to address student mental health concerns. In addition to MHAA funds dedicated to the employment of school social workers, mental health specialists, and community-based providers (as described above), the district intends to utilize MHAA funds to provide specialized supplies, assessments, equipment (a laptop for each new social worker and mental health specialist for data collection and case management), and materials used by social workers and mental health professionals in the course of working with students to ameliorate mental health concerns; costs for training educators and other school staff in detecting and responding to mental health issues (stipends for teachers attending trainings and costs for substitute teachers needed when teachers are in trainings during the school day); and the cost for curriculum materials needed to train educators and curriculum materials used to implement programs with students for addressing mental health issues, substance abuse, and other social-emotional problems. Approximately 15% of the MHAA funds will be dedicated to the “other expenditures” category.

EXPENDITURE ASSURANCES

<table>

<td>Describes how district will maximize use of other sources of funding to provide school-based mental health services (e.g., Medicaid reimbursement, third-party payments and grants).</td>
</tr>
</tbody>
</table>

The funding for the MHAA is managed by the Executive Director of Student Services in coordination with Director of Project Development. One-hundred percent of funding is and will be used to pay the cost of additional school-based mental health professionals, including the salary and benefits for school social workers and mental health specialists; specialized supplies, assessments, equipment (a laptop for each new social worker and mental health specialist), and materials used by mental health professionals; costs for training educators and other school staff in detecting and responding to mental health issues; cost for
curriculum materials needed to train educators and to implement programs with students for addressing mental health issues, substance abuse, and other social-emotional problems; and to fund the cost of contracted services with community-based providers in order to connect children, youth, and families with appropriate mental and behavioral services.

All expenditures made through MHAA funds are supplemental and do not supplant other sources. MHAA funds have not, and will not, be used to increase salaries or to provide staff bonuses.

The district intends to contract with local providers in order to provide all students in need of services those services regardless of insurance or Medicaid. Contracts with community agencies require use of Medicaid funding when it is available. If parents prefer to use students’ primary or other mental health provider, those preferences will be honored, and district mental health specialists will work with parents to document those arrangements and collect relevant data needed for state reporting. Parents will be asked to provide a release of information for the district to consult and coordinate services with all mental health providers.

Identifies the number and ratios of FDOE-certified or licensed, school-based mental health services providers employed by the district (i.e., school psychologists, school social workers, school counselors and other mental health services providers by licensure type).

Total enrollment - 30,318

School counselors – 66 totals—at least one per school. Ratio: 1/459
School Social Workers – 17 total-Ratio: 1/7183
School Psychologists – 10 total-Ratio: 1/3032
Other mental health – 5 (2 district + 3 school-based mental health counselors) Ratio: 1/6063

Includes system for tracking the number of students at high risk for mental health or co-occurring substance abuse disorders who received mental health screenings or assessments; number of students referred to school-based mental health services providers; number of students referred to community-based mental health services providers; number of students who received school-based interventions, services or assistance; and number of students who received community-based interventions, services or assistance.

Mental health services are supervised by the Executive Director of Student Services and Exceptional Education and by the Supervisor of School Counseling. These individuals are responsible for coordinating services at the school level, to include work performed by school counselors, school psychologists, and district social workers. These individuals are also responsible for collection and reporting data and information necessary for the administration of the MHAA Plan. To assist them in this process, the district also employs two district-based mental health specialists (utilizing MHAA funds) to coordinate mental health services at the district level among schools, to coordinate the partnerships and contracts with outside agencies and providers, to facilitate assistance to families in obtaining and accessing services, and to collect program outcome data necessary for reporting. These data include the number of students identified as high risk for mental health or co-occurring substance abuse disorders; the number who
received mental health screenings or assessments; the number of students referred to school-based mental health services providers; the number of students referred to community-based mental health services providers; the number of students who received school-based interventions, services or assistance; and number of students who received community-based interventions, services or assistance. Data is collected using the student information system. School counselors, social workers, and other school-based mental health professionals document student assessments, interventions, and referrals to outside agencies via a district database system. In addition, records are kept through our System of Care monitoring system for enrolled students.

DATE PLAN APPROVED BY SCHOOL BOARD: JULY 21, 2020
