FAU-St. Lucie/Palm Pointe Educational Research School at Tradition (PPERS) is a charter lab school located in St. Lucie County, Florida with a unique partnership between Florida Atlantic University (FAU) and St. Lucie Public Schools (SLPS). While formally a part of the FAU Lab Schools district, SLPS manages the day-to-day operations of PPERS, contractually provides support services to PPERS’ students, and works closely with PPERS’ school counselors and faculty/staff members to ensure that students’ mental health needs are addressed in a timely, effective manner.

This plan provides a comprehensive overview of an established infrastructure designed to address the mental, social and emotional, and behavioral needs of all children. Included is a synopsis of the many existing programs and services currently available in SLPS, which, therefore, are made available to FAU-St. Lucie/PPERS’ students through the school’s partnership with SLPS. It also details plans for the district’s expansion of services – both at the SLPS district-level and FAU-St. Lucie/PPERS school-level - utilizing the Mental Health Services Allocation and the dollars generated through the passage of the voter referendum in St. Lucie County, which provides additional dollars to support mental health.

Establishing these guiding principles allows us to maintain a systematic process to meet the many needs of our students through access to mental health services and to provide timely feedback to our families and community partners. Based in a multi-tiered system of supports, our infrastructure includes a continuum of services that meets the needs of all students.

The Mental Health Services Allocation and the dollars from the district voter referendum have allowed SLPS to expand the services provided. This expansion of services allows SLPS to offer a more immediate response to the students and families served. An intentional focus on the social and emotional well-being of all children will result in increased student achievement, increased attendance and engagement in school, and a reduction in negative outcomes for students such as poor attendance, out-of-school suspension and office discipline referrals.
ASSURANCES

The Mental Health Services Allocation will not be utilized to supplant any existing services or funding source currently used to provide those services or to cover the cost of programs or personnel.

SLPS currently utilizes the Certified School Match Program for Medicaid Billing for students who are Medicaid eligible. The purpose of the Medicaid Certified School Match Program is to provide reimbursement for medically necessary services provided or arranged by a school district for Medicaid eligible students. Other funding sources such as the General Fund, Individuals with Disabilities Education Grant, Title IV, and other Federal Program grants are used to support the work of SLPS in meeting the needs of our students. During the 18/19 SY, the community of St. Lucie County voted on, and successfully passed, a referendum which will also support increased access to mental health services for students by providing more Certified School Counselors, School Social Workers and Behavioral Services for the district.

STATUTORY REQUIREMENTS

Florida’s focus on mental health originated with Senate Bill 7026 (2018) and Senate Bill 7030 (2019) and was signed by the Governor of the State of Florida. Florida Statutes have now been updated to reflect the changes in legislation resulting from these Senate Bills. The Marjory Stoneman Douglas High School Public Safety Act provides a Mental Health Allocation for school districts. The Mental Health Allocation is created to provide funding to assist school districts in establishing or expanding school based mental health care. Each school district is required to submit a comprehensive plan to their individual school boards for approval and then must submit the plan to the Commissioner of Education by August 1st of each fiscal year. Beginning September 30, 2019, and annually thereafter, each school district shall submit to the DOE a report on its program outcomes and expenditures for the previous fiscal year and must include the following:

- Students who receive screenings or assessments
- Students who are referred to either school-based or community-based providers for services, or assistance
- Students who receive either school-based or community-based interventions, services, or assistance
- School-based and community based mental health providers including licensure type, paid for from funds provided through the allocation
- Contract-based collaborative efforts or partnerships with community mental health programs, agencies, or providers
- Direct employment service providers employed by each school district

The plan must also be focused on delivering evidence-based mental health care treatment to children and include:

- Provision of mental health assessment, diagnosis, intervention, treatment and recovery services to students with one or more mental health or co-occurring substance abuse diagnoses and students at high risk of such diagnoses.
- Coordination of services with a student’s primary care provider and other mental health providers caring for the student.
- Direct employment of service providers or a contract-based collaborative effort or partnership with one or more local community mental health program agencies or providers.
The national focus on the need to improve and increase the mental health needs for children across the country is supported by alarming statistics. It has been reported that:

- Approximately one in six school-aged children experiences impairments in his or her life functioning due to a diagnosable mental health disorder.1
- An estimated 70% of children have experienced some type of physical or emotional trauma.2
- Most mental illnesses emerge in childhood3, yet fewer than half of the children receive treatment.4
- Young people with a diagnosed mental illness are frequently absent from school and many experience reductions in academic achievement.5
- Among students with disabling conditions, young people with mental illness are the most likely to drop out of school.6
- Only one third of young people with mental illness advance to postsecondary education.7
- More than 60% of children in juvenile detention have a diagnosable mental illness.8
- Approximately 20% of school-age children and youth have a diagnosable mental health disorder (Merikangas et al., 2010). CDC, 2013
- Prevalence of serious emotional disturbance with severe impairment among children and adolescents = 10%. (Williams et al., 2017).
- Most common mental health disorders. (CDC, 2013). 9
  - ADHD, conduct disorders, anxiety and depression.
  - 9/4% of children aged 2-17 years (approximately 4.5 million) have a diagnosed behavior problem.
  - 7.1% of children aged 3-17 years (approximately 4.4 million) have diagnosed anxiety.
  - 3.2% of children 3-17 years (approximately 1.9 million) have diagnosed depression.

Also:

- Statewide involuntary Baker Act examinations for children increased 49.30% from FY 10/11 to FY 15/16, compared to a 5.53% statewide population increase from 2010 to 2015.
- From 2001 to 2015 the Florida population of people between 5 and 17 increased 10.07% while the number of involuntary examinations for children (<18) increased 116.54%.

Local statistics from St. Lucie County related to the involuntary evaluations resulting from Baker Acts reveal a steady increase and are following trends seen throughout the United States. Each year between 2013 and 2017 there were between 250 and 325 involuntary psychiatric evaluations of children residing in St. Lucie County that resulted from a Baker Act from home, community, or school. During 2018 this number increased to 528. During the 19/20 SY, 616 youth were admitted to New Horizons. (Source: New Horizons of the Treasure Coast).

During the 2018/19 SY, data collected and reported by School Safety and Security reveals that 132 Baker Acts were initiated for students during the hours school was in session. Although only 88 were initiated from schools...
during the 19/20 SY, some of that decline is a result of SLPS students moving to distance learning because of COVID-19.

In addition to these alarming statistics it has been reported that:

- “160,000 kids per day do not attend school for fear of being bullied.” – U.S. Dept. of Justice
- “The child who is overweight is the most likely to be bullied.” – Journal of Pediatrics
- About 28 percent of students ages 12-18 reported being bullied at school during the school year. – Indicators of school Crime and Safety: 2013 report, by the Bureau of Justice Statistics.
- On average across 39 states, 7.2% (range: 3.6% - 13.1%) of students admit to not going to school due to personal safety concerns. – CDC’s Youth Risk Behavioral Surveillance.

The National School Climate Survey conducted by the Gay, Lesbian & Straight Educational Network (GLSEN) in 2011 reported these statistics on bullying:

- 82% of LGBTQ (lesbian, gay, bisexual, transgender and queer or questioning) youth had problems during the previous year with bullying based on sexual orientation.
- 64% felt unsafe at school due to sexual orientation.
- 44% felt unsafe at school due to gender identification.
- 32% did not go to school for at least one day because of feeling unsafe.
- In 2012, Hatzenbuehler and Keyes reported that LGBTQ bullying statistics improved when school policies against bullying included LGBTQ youth.

SLPS also received and processed a substantial number of referrals to the Mental Health Collaborative over the last three years. The numbers are as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Referrals</th>
</tr>
</thead>
<tbody>
<tr>
<td>15/16</td>
<td>456</td>
</tr>
<tr>
<td>16/17</td>
<td>591</td>

<td>769</td>
</tr>
<tr>
<td>18/19</td>
<td>914</td>
</tr>
<tr>
<td>19/20</td>
<td>891</td>
</tr>
</tbody>
</table>

These statistics associated with mental health are alarming and the need for intervention is greater than ever.

The operating mission of SLPS is to ensure all students graduate from safe and caring schools, equipped with the knowledge, skills, and desire to succeed. To carry forward this mission, SLPS must enhance the supports, implementation, and processes we have in place to address the academic, physical, mental and social and emotional needs of our students.

Arne Duncan, U.S. Secretary of Education (2009-2015) stated it perfectly, “Children cannot get a quality education if they don’t first feel safe at school.”

**COLLABORATION AND PARTNERSHIPS**

St. Lucie Public Schools takes enormous pride in the services it provides to students and families through a strong and existing infrastructure, but we, alone, cannot address the need for mental health services. It is critical that we continue to expand our collaborative efforts and partnerships if we are going to address the
ever-increasing mental health needs of students. This plan focuses on the current and well-established services and identifies areas of expansion within the infrastructure to further enhance the service delivery for our students and families.

The Mental Health Assistance Allocation is only one source of funding for this initiative. SLPS relies upon all funding sources available to address the whole child and to strengthen the delivery of services addressing the social and emotional, behavioral, academic and physical development of students.

SLPS will continue to operate within a multi-tiered system of supports for all children and will also rely upon those community agencies that support its foundational work. This includes mental health collaborative partners such as New Horizons of the Treasure Coast, Sequel Care of the Treasure Coast, Suncoast Mental Health Center, Inc., Helping People Succeed, Legacy Behavioral Health, Youth and Family Behavioral Health Center, Hibiscus Children’s Center and Chrysalis Health. We also have partnerships with Drug Abuse Treatment Association, Treasure Coast Health, St. Lucie County Health Department, Department of Juvenile Justice, Department of Children and Families, St. Lucie Sheriff’s Department, Fort Pierce Police Department, Port St. Lucie Police Department and all other sources of support with which we collaborate throughout the school year.

A MULTI-TIERED SYSTEM OF SUPPORTS TO GUIDE OUR WORK ADDRESSING MENTAL HEALTH

- **Tier 1**
  
  Support is designed to address prevention and is delivered to all students within the general education environment.

- **Tier 2**
  
  Supports are designed to address the needs of students who are not successful with prevention activities and who need additional intervention to address issues related to academic, behavioral, or social and emotional development. Tier II interventions require appropriate problem-solving approaches using all available data relevant to the issue of concern. Problem-solving teams design evidence-based interventions to address student needs. These interventions are provided in small group settings and are most often provided with additional resources available within the school setting.

- **Tier 3**
  
  Supports are designed to address the needs of students with the most intensive academic, behavioral, social/emotional, and mental health needs. As with Tier II, Tier III interventions are identified by problem-solving teams and matched to student needs. These interventions are evidence-based and designed to match the presenting need of the student.

St. Lucie Public Schools has a long-standing tradition of building and supporting an infrastructure to address the academic, behavioral, social and emotional needs of all children. Utilizing a multi-tiered system of supports, SLPS frames its tiered system at each level with the necessary components to help children achieve academic success and social and emotional well-being.

SLPS also has in place an Early Warning Detection System which allows the district to more effectively serve students who are at risk by identifying those who may be experiencing academic difficulty, suspension from school and chronic absenteeism.
Modeling its approach after Florida’s Systems of Supports for School Based Mental Health (see below) St. Lucie Public Schools has developed a Multi-Tiered Systems of Supports to address the social, emotional, mental, and behavioral health needs of all children. The system of supports, outlined through the tiered approach, provides opportunity for prevention for all students with great emphasis at Tier 2 and Tier 3 to address the individualized needs of children at risk of or in need of higher level of intervention. The preventive measures support the entire infrastructure, from positive behavioral intervention and supports, intentional and deliberate instruction for social emotional learning to expanding professional development for faculty and staff in understanding youth mental health. The intervention systems focus greatly on active involvement of school-based and district level personnel to provide a continuum of supports for all children.

---

**Florida’s System of Supports for School Based Mental Health Services**

**TIER I: AWARENESS AND PREVENTION TO ADDRESS MENTAL HEALTH**

**POSITIVE BEHAVIORAL INTERVENTIONS AND SUPPORTS**

Building on our established framework of Positive Behavioral Interventions and Supports (PBIS) and a continued collaboration with the University of South Florida’s PBIS discretionary project, SLPS maintain a significant focus on improving positive outcomes for students. Using PBIS as the model framework for the district allows us to blend our work with other district initiatives such as Kids at Hope and Single School Culture. Instead of operating as stand-alone programs or philosophical approaches, SLPS incorporate all under the over-arching umbrella of PBIS. Maintaining the focus of our schools on the implementation of PBIS and connecting this to all other initiatives has garnered an impressive 31 Model PBIS schools for the district in the 19-20 SY, including FAU-St.Lucie/PPERS. Schools who have achieved model school status have successfully demonstrated outcomes resulting in reduction of office discipline referrals (ODRs) and in-school and out-of-school suspensions and have an established multi-tiered system of supports to meet the academic and behavioral needs of all students.

<table>
<thead>
<tr>

<tr>
<td>Number of Out of School Suspension Days</td>
<td>20,640</td>
<td>10,706</td>
</tr>
</tbody>
</table>
Model Schools are recognized for using team-based planning and problem solving to implement positive behavior supports and interventions within a multi-tiered system of supports. In two years, SLPS has reduced out-of-school suspensions and office discipline referrals significantly (see above). These results have been achieved by supporting our teachers and students through positive behavioral supports and intentional instruction in social and emotional learning.

- Village Green Elementary
- FAU-St. Lucie/PPERS

For the 20/21 School Year, SLPS will continue to expand its collaboration with USF FLPBIS for quality professional development in additional areas such as PBIS School-Based Coaching and Tier II Supplemental Support Training. SLPS will continue its work associated with Restraint and Seclusion of students with disabilities.

This collaboration and the ultimate benefit to all students aligns with the vision and mission for the school system.

MENTAL AND EMOTIONAL HEALTH EDUCATION IMPLEMENTATION

SLPS developed a Mental and Emotional Health Education Implementation Plan aligned with State Board rule 6A-1.094121 requiring a minimum of five hours of instruction related to mental and emotional health education for students in grades 6-12. The plan clearly outlines curricula, planning requirements, and courses in which the instruction is delivered. The Office of Teaching and Learning, in collaboration with the Department of Student Services, provided professional development for all teachers responsible for the delivery of instruction, including those at FAU-St. Lucie/PPERS.

SANDY HOOK PROMISE, START WITH HELLO

Throughout the 19/20 school year students in grades 6-12 participated in Start with Hello presentations hosted by Sandy Hook Promise, including middle schoolers at FAU-St. Lucie-PPERS. The Start with Hello training program empowers students to end social isolation by teaching them three easy steps:
➢ See Someone Alone: how to recognize the signs of loneliness and social isolation
➢ Reach Out and Help: what students can do to help others feel included
➢ Start With Hello: how to break the ice and strike up a conversation

Because of students’ initial participation in the presentations, individual schools launched student-led Start with Hello campaigns across the district to create a more inclusive school environment for all students. Schools will continue the campaigns by celebrating Start with Hello week during the 20/21 SY.

SAVE PROMISE CLUBS

SLPS hosted the Sandy Hook Promises’ Students Against Violence Everywhere Student Conference. Over 90 students from middle, K-8 and high schools attended the conference. Participants gained information to assist them in developing their own SAVE PROMISE CLUBS at their local school sites, including at FAU-St. Lucie/PPERS. These clubs are established and led by students to develop approaches to preventing gun violence and victimization.

CHAMPS CLASSROOM MANAGEMENT SYSTEM

To protect the integrity of the instruction occurring in the classroom, SLPS and FAU-St. Lucie/PPERS utilize a universal approach to classroom management. The CHAMPS classroom management program develops an instructional structure in which students are responsible, motivated, and highly engaged in the specific task at hand. The teacher teaches students how to be successful in specific classroom situations, including how to participate and maintain full engagement in the learning process while demonstrating self-regulation skills. Each of these is taught and practiced throughout the school year.

KIDS AT HOPE

SLPS further establishes its universal approach to the social and emotional well-being of all children by incorporating best practices from our community partners and stakeholders by practicing the belief that we are a community of hope. The Roundtable of St. Lucie County, comprised of a variety of service agencies within the county, introduced the Kids at Hope Philosophy to our community. The underlying premise of Kids at Hope is that “All Kids are Capable of Success—No Exceptions!” Following the vision of the Kids at Hope philosophy that every child is afforded the belief, guidance and encouragement that creates a sense of hope and optimism, teachers and staff support students so that they can identify a course of action needed to experience success at life’s four major destinations:

- Home and Family;
- Education and Career;
- Community and Service;
- Hobbies and Recreation;

Within the course of five years, all SLPS staff have been trained in the Kids at Hope philosophy and the work continues to expand to all stakeholders creating a community of hope.

The Kids at Hope Gallup Survey is used with students to measure engagement, hope, entrepreneurial aspiration and career/financial literacy in grades five to twelve. The Gallup Survey includes non-cognitive metrics linked to student success.
Over the last three years, SLPS has been shifting its processes in schools to follow a Single School Culture Model. The work begins with establishing shared norms, beliefs, values and goals that result in agreed upon processes and procedures that will produce consistency in practices. Single School Culture practices are related to academics, behavior, climate of the school, and data collection and review. The Single School Culture process aligns with our current PBIS and Kids at Hope practices.

Operating within an understanding that attendance is critical to the academic and social and emotional success of the individual student, SLPS has worked diligently to address these issues. SLPS has increased its focus on absenteeism to ensure that children attend school and receive the necessary supports to achieve success. School based attendance teams comprised of administration, faculty, support staff and district level staff meet monthly to discuss students who have demonstrated chronic absenteeism or truancy issues. Every attempt is made to include parents in the attendance committee meetings. For students who have demonstrated chronic absenteeism (21 days or more absent from school), every effort is made to ensure that accurate documentation is provided to address the reasons for absenteeism and then support systems are put into place to increase student attendance. For students who are chronically absent or truant from school, the local law enforcement officers who normally patrol the community have all been trained in proper procedures for approaching students and providing alternatives to the student which may include returning the student to school or returning the child to the home setting for parental intervention. For students who are suspended out of school, information is provided identifying alternatives to-out-of-school suspension that the student can attend each day. As this is a high-level initiative due to a chronic absenteeism rate of over 18% districtwide (2018 DOE Database), data is monitored constantly to ensure that the focus remains on keeping students in school.

During the 19/20 SY the district launched a new attendance initiative entitled “We Belong in School.” Included in this initiative is a District level attendance team to guide the work of both the district and individual schools. Each school has made attendance a priority with parents and continues to notify parents when students are not in attendance at school. School Social Workers assist in communicating with parents and attendance teams and work individually with families to assist in obtaining any supports necessary to help them keep their children in school. The Academic Success Network (a network of community organizations) has aligned its work with the District’s initiative to reduce chronic absenteeism and truancy. As active partners, SLPS continues to work collaboratively with local law enforcement agencies to address the attendance and truancy issue.

Students who identify as Lesbian, Gay, Bisexual, Transgender, or Questioning (LGBTQ) are at greater risk for suicide than their heterosexual peers. Specifically, the 2019 Youth Risk Behavior Survey suggests that LGBTQ youth are 4x more likely to attempt suicide than their heterosexual peers. SLPS recognizes the importance of meeting the needs of youth and has been educating staff, as well as providing opportunities for connectedness in schools through the development of Gay Straight Alliance (GSA) clubs. The district also established a district-level committee to ensure implementation of best practices, including ongoing professional development for district- and school-based staff. Through collaboration with Equity Florida, the district provided training for all school psychologists, school social workers, and school counselors on working with students who identify as LGBTQ. During the 20/21 school year the district will expand upon this by providing training for all school administrators.
St. Lucie Public Schools has created a Social Emotional Learning (SEL) Department comprised of a Director, two SEL Specialists and a Parent Educator. The social and emotional development of children is vitally important to gain the social competence necessary for eventual success in life. The focus of the SEL Department is to establish Tier One universal programming for students at all grade levels district-wide with an emphasis on the five core competencies taught in diverse settings throughout the school and classroom. The five core competencies are self-awareness, self-management, social awareness, relationship skills and responsible decision making. A district SEL Task Force worked with a leading SEL expert consultant to create a systemic SEL implementation plan. A three-prong approach has been adopted including explicit instruction using the adopted SEL curriculum, integration of SEL strategies in all content, and infusion of SEL practices into school climate and culture. Evidence-based curricula approved through the Collaborative for Social, Emotional and Academic Learning has been selected by grade level bands. In addition, the curriculum has been purchased for all schools. The SEL Department provides initial professional development of all curricula and ongoing support for effective classroom facilitation. All elementary schools are implementing Sanford Harmony Meet Up circles daily and a weekly lesson. In the middle grades, Lions Quest is the adopted curriculum and is facilitated in conjunction with community circles.

Utilizing the Mental Health Allocation, FAU-St. Lucie/PPERS plans to fund a part-time, school-based SEL specialist to assist with the full integration of social and emotional learning and appropriate behavioral intervention programs and strategies, as well as lead the school’s SEL team and collaborate with SLPS’ SEL department. FAU-St. Lucie/PPERS will also use the Mental Health Allocation to purchase SEL curriculum related resources and provide training opportunities for staff members. (See cost analysis sheet attached)

RESTORATIVE PRACTICES

Restorative Practices is the study of restoring and developing social capital, social discipline, emotional well-being, and civic participation through participatory learning and decision making. Professional development and follow up support in restorative practices involving classroom-based community circles and use of affective statements will continue through SLPS’ partnership with the discretionary project at USF for PBIS. In addition to the work with USF, SLPS’ SEL Department will take the lead in providing on-going professional development around restorative practices in schools.
The Student Assistance Program is a comprehensive school-based prevention program designed to prevent and reduce substance use/misuse and violence among youth. Funding for this program is provided by the Children’s Services Council of St. Lucie County and the Department of Children and Families and allows for the placement of 14 Student Assistance Program counselors in SLPS. The Student Assistance Program provides evidence-based substance abuse and violence prevention curricula to students in kindergarten through 8th grade, including the district-mandated “Too Good for Drugs” program, which is provided to every 5th grade classroom in the county, and “Too Good for Violence,” which is presented to many of our middle school students. Beginning in the 2019-2020 school year, the Student Assistance Program also began offering the Botvin Life Skills Training program to both elementary and middle school students. This curriculum is one of the top research-based curricula in the country and is a Blueprints for Healthy Youth Development model program. Prevention services are also available to children on an individualized basis. Referrals for individualized services are made primarily from the school’s Problem-Solving Teams, which may include teachers, school counselors, and principals, etc. Students and parents may also contact the Student Assistance Prevention Specialist directly. Children are screened by the Prevention Specialist to determine eligibility and appropriateness for individualized prevention services. The skills taught by Student Assistance Prevention Specialist programs help to reduce risk factors and strengthen protective factors related to the onset of numerous high-risk behaviors, including bullying behaviors, truancy, and alcohol, tobacco, and another drug use.

Substance Abuse Awareness Education was offered during the 19/20 school year as an intervention for students identified as first-time marijuana users. This option allows students to remain at their home-school campus in lieu of a placement at an alternative school setting. Students are required to complete six sessions, facilitated by a licensed mental health professional. Successful completion of this course will satisfy the Substance Abuse Awareness Education requirements as defined in the student’s individual stipulated order.

Suicide is the second leading cause of death for youth between the ages of 15-19. Suicide rates increased by 25% across the United States over nearly two decades ending in 2016, per research published recently by the US Centers for Disease Control and Prevention. Twenty-five states experienced a rise in suicides by more than 30%, and Florida saw an increase of 10.6%.

Based on the 2019 Florida Youth Risk Behaviors Survey (YRBS), 7.9 percent of youth in grades 9-12 reported that they had made at least one suicide attempt in the past 12 months. Girls attempted more often than boys (9.6% vs. 6.0%) and Black teens reported the highest rate of attempt (9.5%), especially Black females (13.2%), when compared with white students (7.6%) and White females (8.7%). This is a 5% increase for Black females from the 2017 YRBS. Approximately 2.2% reported making a suicide attempt that required treatment by a doctor or nurse. For those requiring treatment, rates were highest for Asian students with black females (3.2%) and Hispanic males (2.8%), with both having higher rates than white male (1.4%) students.

Based on the most recent information provided from the 2019 Florida Youth Risk Behavior Survey, 34% of Florida high school students reported feeling sad or hopeless for two or more weeks in a row; 16% reported purposely hurting themselves without wanting to die; 16% reported having seriously considered attempting suicide; 12% reported having planned to attempt suicide; and 8% reported a suicide attempt. Except for suicide attempts, each of these is an increase from the 2017 Florida YRBS.
To address these staggering statistics, it is necessary to teach suicide prevention and to help students understand how to seek help for themselves or their friends. Many students need both prevention and intervention services. Our goal, which is part of our mission of providing safe and caring schools, is to ensure the provision of these services, for all who need them.

In May 2020, the State Board of Education adopted rule 6A-4.0010 which established criteria and procedures for schools to be recognized as Suicide Prevention Certified Schools. This recognition requires staff training, the adoption of a suicide risk assessment using an approved instrument, and a district policy requiring such instrument. To date, 16 SLPS schools have completed the necessary requirements to be recognized as a Suicide Prevention Certified School, including FAU-St. Lucie/PPERS. The goal for the 20/21 SY is to ensure this recognition for an increased number of schools.

**SIGNS OF SUICIDE (SOS)**

The Signs of Suicide (SOS) Prevention Program is a universal, school-based depression awareness and suicide prevention program designed for middle-school (ages 11–13) or high-school (ages 13–17) students. The goals are to 1) decrease suicide and suicide attempts by increasing student knowledge and adaptive attitudes about depression, 2) encourage personal help-seeking and/or help-seeking on behalf of a friend, 3) reduce the stigma of mental illness and acknowledge the importance of seeking help or treatment, 4) engage parents and school staff as partners in prevention through “gatekeeper” education, and 5) encourage schools to develop community-based partnerships to support student mental health (Suicide Prevention Resource Center).

During the 19/20 SY, in partnership with Sandy Hook Promise, all school psychologists and school social workers, as well as identified school counselors, participated in a ‘train the trainer’ professional development session. This training allowed participants to train teachers and other school counselors on the implementation of SOS in their schools.

SLPS will begin the fifth year of implementation of SOS during the 20/21 SY. We have provided this instruction to all ninth-grade students each year at all comprehensive and alternative schools where ninth grade students are enrolled. In addition to direct instruction with students, the 19/20 SY also included the addition of a depression screener with follow-up by school or district personnel. Since its inception, school psychologists and school social workers have taught this curriculum in all schools. Beginning with the 20/21 school year, school counselors will work with classroom teachers to ensure that the SOS curriculum is taught during the month of October.

**TRAUMA INFORMED CARE**

Trauma Informed Care is a strengths-based framework that is responsive to the impact of trauma on children and emphasizes physical, psychological, and emotional safety for all. The framework focuses heavily on relationship building within the school system and allows individuals an opportunity to gain a better understanding of students.

SLPS continues its work in this area through guidance and assistance from SEDNET and through our partnership with TYKES and TEENS of the Treasure Coast. SLPS is currently working with other community partners as well to expand our Trauma Informed Practices in schools.

**UNIVERSAL SCREENING**

Mental health screening is an important component of comprehensive school mental health services and allows for identification of students who may need additional services. SLPS continue to investigate the feasibility of implementing a universal mental health screener. During the 20/21 school year, SLPS will develop
a plan to implement a universal mental health screening in targeted grades at the elementary, middle, and high school levels.

**YOUTH MENTAL HEALTH FIRST AID**

In 2014/15, SLPS received a Project AWARE grant from SAMHSA (Substance Abuse and Mental Health Services Administration) for Youth Mental Health First Aid (YMHFA) training in order to promote positive mental health and awareness of students who may need intervention. During the 2018-19 School Year, additional funds were made available through the Youth Mental Health First Aid Training Grant to provide training for all employees within the school system as mandated in Florida Statute. YMHFA is an eight-hour education program which introduces participants to the risk factors and warning signs of mental health problems in adolescents and builds an understanding of the early intervention necessary to address these mental health issues. These grants have afforded us the opportunity to certify 31 district personnel as trainers of Youth Mental Health First Aid. Since the initial roll-out of training for school personnel, SLPS have now trained more than 1500 individuals both within the school system and within the community.

**KOGNITO**

SLPS offered Kognito on-line training for all instructional and non-instructional staff during the 19/20 SY. This 1.5-hour training provides staff with an overview of mental health first aid for youth and ways to promote positive mental health and awareness. The training also provides educators with information to recognize signs to look for when students may require intervention. The on-line module does not replace the required Youth Mental Health First Aid training as mandated by Florida Statute but gives educators tools to support youth.

**TIER II: SUPPLEMENTAL/AT-RISK**

**SCHOOL-BASED MENTAL HEALTH SERVICES**

Tier II mental school-based mental health services are generally going to be delivered in a small group setting and are provided by either a school psychologist, school social worker, school counselor, or school-based mental health counselor. These evidence-based interventions are designed to address a variety of social/emotional and mental health concerns. Each mental health professional leading the group matches the curriculum and/or resources to the needs of the group. Examples of evidence-based programs that are used for these Tier II groups include Second Step and Cognitive Behavior Intervention for Trauma in Schools (CBITS). Additionally, all school psychologists, school social workers, and school-based mental health counselors have received training in Cognitive Behavioral Therapy (CBT), so those evidence-based strategies may also be used within the Tier II groups. All students referred for Tier II counseling will be seen within 15 days of referral. Students who demonstrate a need for more intensive mental health services, even after participating in Tier II interventions, may be referred for Tier III interventions.

**COLLABORATIVE AGREEMENTS ADDRESSING OUT-OF-SCHOOL SUSPENSION**

SLPS has multiple collaborative agreements with outside agencies for the provision of assistance to students and to meet the many mandated instructional requirements. To address out-of-school suspensions of students, SLPS has cooperative agreements funded by the Children’s Services Council to target suspension and provide an alternative to out-of-school suspension. Project Rock North and Project Rock South both provide an alternative to suspension and provide daytime programs for children to attend in lieu of staying at home if suspended from school. Participation in the alternative program affords the student an option of staying current with their classwork and allows them to exchange the out-of-school suspension to an in-school suspension upon completion of the program. Suspensions, both in and out of school, are early warning
indicators that can lead to a reduction in instructional time and social isolation which can result in increased mental health issues.

### PROJECT SUCCESS

SLPS also partners with community agencies to expand the reach of student support services for all students while avoiding duplication of services. SLPS also has an agreement with Drug Abuse Treatment Association to provide Project Success Counselors in eight of our middle/high schools to focus on drug prevention and intervention. The individuals work all year with identified schools providing prevention and intervention assistance. Utilized as a Tier I approach focusing on all students for prevention, much of the intervention moves to a Tier II and Tier III level when the need arises for more individualized approaches to deal with a substance abuse issue. This program places six prevention specialists in our schools.

### SEDNET (THE NETWORK FOR SEVERELY EMOTIONALLY DISABLED STUDENTS)

SLPS serves as the fiscal agent for the discretionary project of SEDNET. SEDNET serves the counties of St. Lucie, Okeechobee, Martin, and Indian River. SEDNET focuses on:

- Supporting and representing the needs of students in each school district in joint planning with fiscal agents of children's mental health funds, including the expansion of school-based mental health services, transition services, and integrated education and treatment programs.
- Improve coordination of services for children with or at risk of emotional or behavioral disabilities and their families by assisting multiagency collaborative initiatives to identify critical issues and barriers of mutual concern and develop local response systems that increase home and school connections and family engagement.
- Increase parent and youth involvement and development with local systems of care.

Florida Statute clearly defines SEDNET as the multiagency network for students with emotional and behavioral disabilities which works with education, mental health, child welfare, and juvenile justice professionals, along with other agencies and families, to provide children with mental illness or emotional and behavioral problems and their families with access to the services and supports they need to succeed. In addition, SEDNET will continue to support our on-going training and implementation of Youth Mental Health First Aid, Trauma Informed Care and Practices, CHAMPs and Crisis Prevention Intervention throughout the district.

### TIER III: INDIVIDUALIZED/INTENSIVE

**SCHOOL-BASED MENTAL HEALTH SERVICES**

Tier III mental health services are intended to be more intense and are provided to students who demonstrate more significant mental health needs such as unique behavioral or social and emotional needs that cannot be addressed in a small group setting. These interventions are generally going to consist of individual counseling and may be provided by a school-based mental health professional (school psychologist, school social worker, school counselor, or school-based mental health counselor) or a community-based mental health counselor. Each school-based mental health provider will determine which theoretical approach to counseling (e.g. CBT, Motivational Interviewing) to utilize with each student. Documentation of the intervention will be maintained in Skyward, with progress monitoring completed and reviewed at more frequent intervals than Tier II services. All students referred for Tier III counseling will be seen within 15 days of referral.
The established multi-tiered system of supports in SLPS ensures that each student’s needs are addressed. However, in cases where students’ needs are greater than can be met through school-based services, the District has a collaborative agreement, known as the Mental Health Collaborative, with eight community mental health agencies to expand the mental health services available to students. This collaborative works to reduce the burden imposed on parents when trying to obtain the necessary services for their children by allowing for the community agencies to provide counseling services on campus, during the school day. To further improve access to mental health services, during the 19/20 SY each school was assigned an agency counselor who would begin building a full-time caseload at the school. Once the agency counselor has a full-time caseload, they will be located at the school full-time. This will allow for increased access to services, as well as improved communication between the school and the agency.

The primary source of funding for services comes from Medicaid or private insurance. However, services for students without insurance may be funded through the district’s Mental Health Allocation. A condition of referral through the Mental Health Collaborative is that the parent/guardian signs a release that allows for the communication between the school system and the agency. SLPS adhere to both FERPA and HIPPA regulations with the integration of this requirement. This ongoing communication allows the district to coordinate services in a more precise manner.

School counselors are certified/licensed educators with a minimum of a master’s degree in school counseling, making them uniquely qualified to address all students’ academic, career and social/emotional development needs by designing, implementing, evaluating and enhancing a comprehensive school counseling program that promotes and enhances student success.

School counselors are employed in elementary, middle/junior high and high schools; in district supervisory positions; and counselor education positions. School counselors serve a vital role in maximizing student success (Lapan, Gysbers, & Kayson, 2007; Stone & Dahir, 2006).

Through leadership, advocacy and collaboration, school counselors promote equity and access to rigorous educational experiences for all students. School counselors support a safe learning environment and work to safeguard the human rights of all members of the school community (Sandhu, 2000) and address the needs of all students through culturally relevant prevention and intervention programs that are a part of a comprehensive school counseling program (Lee, 2001). The American School Counselor Association recommends a school-counselor-to-student ratio of 1:250. SLPS has lowered the Student to Counselor ratios. After reviewing counselors’ time demands, SLPS added a testing coordinator to every school to increase their time with direct counseling related to activities to support social and emotional growth and to provide direct attention to the mental health needs of students. SLPS currently employs 86 Professional/Certificated School Counselors. FAU-St. Lucie/PPERS currently employs three Professional/Certificated School Counselors, one of which will continue to be funded using the Mental Health Allocation. Additionally, a temporary School Counselor will be added for the start of the school year, when one of our full-time School Counselors will be on Family Medical Leave. Having three School Counselors lowers the school counselor to student ratio and assists us in meeting the needs of all children in a timely manner. (See cost analysis sheet attached)

**SCHOOL PSYCHOLOGISTS**

SLPS currently employs 20 School Psychologists for the provision of services to all traditional and charter schools within our district, including FAU-St. Lucie/PPERS. The school psychologist functions as a member of the total educational team and brings specialized knowledge and skills related to the learning processes, techniques of assessment of learning and social adjustment, research design and modification of behaviors. School Psychologists apply expertise in mental health, learning and behavior, to help children and youth succeed academically, socially, behaviorally and emotionally. The NASP recommendation for school psychologists is 1:500-700 students.
Much of the work of the school psychologist has been to work within the realm of Child Find activities to identify and evaluate children suspected of having a disability. These individuals have a broader skill set and will be utilized to provide more services in mental health as SLPS lower the student to school psychologist ratio. SLPS will expand our work in the areas of prevention and intervention to students. Utilizing the Mental Health Allocation, FAU-St. Lucie/PPERS plans to increase the amount of time our SLPS-designated school psychologist is at PPERS for the 19/20 school year to two full days a week. This increase will lower the school psychologist to student ratio and assist us in meeting the needs of all children in a timely manner, which will also include the identification and evaluation process for children who may be suspected of having a disability or in need of immediate intervention to address their mental health needs. (See cost analysis sheet attached)

**SCHOOL SOCIAL WORKERS**

SLPS currently employs 19 Social Workers composed of both Licensed Clinical Social Workers and master's level DOE Certificated School Social Workers. The social workers provide a variety of services to students and their families who are referred for assistance in the prevention and remediation of problems in attendance, behavior, health (including mental health) and social adjustment. School Social Workers are uniquely qualified to provide mental health counseling and services to students and are vastly aware of the services within our community. The national recommendation for school social workers is 1:250.

Five additional positions were added in SLPS for the 19/20 SY and paid for from the SLPS Referendum, which also supports mental health access and services for students, bringing the total of School Social Workers to 19 for the district. The addition of these positions has greatly reduced the ratio and enhanced the services to students and families.

**MENTAL HEALTH COUNSELORS**

SLPS currently employees three full-time mental health counselors from its mental health allocation and one mental health counselor from the TSSSA grant. Through its Mental Health Allocation, FAU-St. Lucie/PPERS currently employs one part-time mental health counselor and plans to continue to do so for the
The 20/21 SY. This counselor is responsible for providing individual and group counseling services with identified students. The mental health counselors are responsible for billing Medicaid, when possible, for all services provided. (See cost analysis sheet attached)

**CLINICAL PSYCHOLOGIST SERVICES**

In many cases SLPS’ need for mental health intervention and services goes beyond the current level of school-based services provided. To meet the need to students who may need a more in-depth analysis of their behavioral or mental health issues, SLPS will contract with a clinical psychologist for a referral and evaluation and potential treatment process.

**MEDICAID BILLING**

All eligible personnel employed in SLPS will be required to utilize Medicaid as a billing source for services provided through assessment, diagnosis, intervention, treatment or recovery. All school psychologists and social workers currently bill Medicaid routinely for the services they provide. Any expansion of services involving eligible school-based personnel such as mental health counselors will also be required to bill Medicaid.

**PROCEDURES FOR REFERRING STUDENTS FOR COMMUNITY-BASED MENTAL HEALTH SERVICES**

Students can be referred for school-based or community-based mental health counseling and substance abuse treatment services. If students are participating in school-based mental health services and require more intensive support, a referral for community-based mental health may be initiated. Referrals for these services can come from teachers, school counselors, Problem Solving Teams or other sources on campus. Once a determination has been made that a student needs mental health counseling or services through the Mental Health Collaborative, the following steps must occur:

- The School Counselor (or other school or district staff member) completes the referral form and contacts the parent to obtain consent for the referral.
- The parent or legal guardian MUST sign the consent form, including the Release of Information form, for the referral to be processed.
- The referral form is then submitted to the designated district staff member in the SLPS District Office of Student Services.
- A determination is made as to whether the child has Medicaid or private insurance to pay for the counseling service or if the district will pay the cost of the mental health service

Once the referral has been made, the information is entered into Skyward, our Student Information System. The referral is then disseminated to the appropriate agency for services. The referring staff person can check the status of the referral by checking in Skyward. Reports can be generated to determine how many students were referred and to which agencies.

Once the student has been assigned to a mental health provider for services, the following will occur within 30 days:

- An intake meeting will be held with the agency, the student and their parent/guardian
- Consent is obtained from the parent for services to begin
- A schedule of services will be developed with the child and family
Each agency involved in the collaborative is required to submit monthly progress reports on the status of each student they are serving. Additionally, all agencies participating in the collaborative will bill Medicaid or third-party insurance for services rendered before requesting payment for services by the school board.

### SUBSTANCE ABUSE

The school district currently has a partnership with two local agencies that provide substance abuse treatment services for youth. Both agencies serve SLPS with prevention programs. Students who need substance abuse treatment services who attend schools that are served by one of these two agencies would be referred to the on-site counselor. If more intensive services are needed, the prevention specialist would then make a referral to an outside agency for services. For students attending schools that are not served by one of these two prevention programs, a referral can be made directly to one of the local substance abuse treatment program providers.

During the 19/20 SY, School Social Workers provided substance abuse counseling sessions, utilizing an evidence-based curriculum, with students who were recommended for expulsion based on first-time marijuana use.

### OUTCOME DATA USED TO EVALUATE THE EFFECTIVENESS OF SERVICES

Following the guidelines for reporting mental health services outlined in Florida Statute, our current Student Information System (SKYWARD) or one of our other data collection systems will be updated to reflect data elements that will be utilized to evaluate the effectiveness of the services provided and the achievement of outcomes associated with the delivery of those services. These required data elements include the following:

- Students who received mental health screenings or assessments.
- Students who are referred to either school-based or community-based providers.
- Students who receive either school-based or community-based interventions
- School-based and community-based mental health providers, including licensure type, paid for from funds provided through the allocation.

In addition to the required data elements that must be reported to the state, SLPS will also continue to measure the effectiveness of our programs by linking the services to measurable student outcomes related to an increase in the social and emotional wellness of students. These include increased student achievement, as well as a reduction in in-school and out-of-school suspension, chronic absenteeism, involuntary examinations or Baker Acts, and office discipline referrals. All staff will be held accountable for adhering to the reporting guidelines and collection of data.

### ADDITIONAL INFRASTRUCTURE TO ENHANCE MENTAL HEALTH SERVICES

#### PREPARE CURRICULUM TRAINING

The PREPaRE Curriculum was developed by the National Association of School Psychologists (NASP) and is an evidence-based resource focusing on school crisis prevention and response. This training aligns with SLPS’ continued work to strengthen school safety and crisis management teams at its schools. This training also focuses on training individuals to meet the mental health needs of individuals after a crisis. All school psychologists, social workers, and social/emotional learning specialists participated in PREPaRE Workshop 2 training during the 18/19 school year. During the 20/21 school year, all school psychologists, social workers,
and social/emotional learning specialists will participate in PREPaRE Workshop 1 to further support to schools with the district’s crisis prevention/intervention procedures.

THREAT ASSESSMENT

A Comprehensive School Threat Assessment Violence Prevention Procedure was implemented during the 19/20 SY. Each school, including FAU-St. Lucie/PPERS, was required to form a threat assessment core team that included the following members:

- school administration
- licensed mental health professional
- law enforcement
- instructional personnel

Threat assessment core team members from each school were trained by the School District’s lead trainer in the threat assessment procedures. The primary purpose of a threat assessment is the prevention of violence, when a potential threat is made the threat assessment teams complete the threat assessment response protocol to determine why the student made the threat, the level of the threat, and interventions that may need to be implemented including but not limited to mental health services.

MENTAL HEALTH CAMPAIGN

To Kick-off Mental Health Awareness Month St. Lucie Public Schools launched a Mental Health Awareness Campaign #slpsmhmatters in May 2020. Due to COVID-19, SLPS recognized the increased need to connect with families and students more than ever before. SLPS dedicated a phone line for families and students to speak with a licensed mental health professional during regular business hours. Throughout the month of May, SLPS communicated with students, families, and staff via social media and virtual platforms and provided a family calendar which daily tips and activities to celebrate mental health awareness. The department also created resources for families and students to access mental health supports within the community. In addition, SLPS shared on-line resources with families, students, and staff that included courses on self-care and mindfulness, just to name a few.

COVID 19 RESPONSE

In response to COVID-19, St. Lucie Public Schools and FAU-St. Lucie/PPERS quickly shifted to remote learning. Realizing the need to remain connected with students and families and to provide a Continuum of Mental Health services, district-based mental health professionals worked with each school team to develop plans to provide supports for students in the remote learning environment. Staff clearly defined levels of support that students may require in their remote environment and developed an action plan to meet their needs. Because of their combined efforts, staff were able to provide support to 2,096 students.
FAU-St. Lucie/PPERS is a single, K-8 school, with no other schools sharing its allocation.

As with any new shift in addressing the needs of children, this new focus on the delivery of evidence-based mental health services will require all individuals to re-focus their way of work. School Psychologists and School Social Workers will now have their student caseloads reduced due to the addition of staff. This reduction in the staff to student ratio will afford these individuals an opportunity to be more proactive in identification of the specific needs of children. This additional time will also allow them to problem-solve with administration ways to address the specific needs of schools related to the provision of services that address the specific behavioral, social and emotional and mental health needs of students.

As part of SLPS' continuing efforts to focus on mental health for the district, school psychologists, school social workers, and mental health counselors participated in Cognitive Behavioral Therapy training hosted in partnership with Florida Atlantic University. To equip SLPS' staff with the tools necessary to meet the diverse needs of our students, it will continue to provide quality professional development to all school-based mental health providers.

SLPS continue to work toward our goal of strengthening and expanding the mental health services provided to the students enrolled in St. Lucie Public Schools and FAU-St. Lucie/PPERS. SLPS' efforts involve extensive and ongoing collaboration both within the district and with its community partners. This collaboration is essential to the success of its efforts and will allow SLPS to create a coordinated system of care to meet the needs of its students and families.

SLPS have established a well-defined multi-tiered system of supports that focuses on prevention for all students with systematic interventions to address small group and individual needs. The tiered system of supports is designed with evidence-based programs and processes to enhance the education of all children and to address the social, emotional, mental and behavioral health needs of students. The intentional design of the infrastructure, with a strong focus on prevention and intervention will aid in reducing the barriers that
exist and prevent full access and participation in the educational process. SLPS' infrastructure is strong and the focus on the mental health of students will only enhance those structures, which will result in improved outcomes for all children.

FAU-St. Lucie/PPERS is grateful to Treasure Coast University Schools (TCUS) Board, FAU, SLPS' Superintendent, SLPS, and the Board of Education for their continued leadership and support of our work to address the needs of all children.

No coverage (please check) ______

Community Mental Health Services:
If I/we give consent to the School Board of St. Lucie County to release and exchange my child’s personally identifiable information with mental health partner agency(s) for the purpose of developing and implementing a plan of care for my child. The social security number will be used to determine eligibility for Medicaid. I/we understand that I/we will be contacted by the community mental health agency and that it is my responsibility to make and keep all appointments with them for the benefit of my child and that not doing so can result in community mental health services not being delivered to my child. I/we also consent to agents of the community mental health agency serving my child’s school to obtain personally identifiable information on an ongoing basis that is important to the continued implementation and evaluation of the plan of care for my child. Consent is also given for agents of the community mental health agency to observe and see my child during the school day at a time agreeable to the school.

PROHIBITION ON REDISCLOSURE: This information has been disclosed from records whose confidentiality is protected. Federal and State rules prohibit anyone from making any further disclosure of this information unless the parent provides specific written authorization for the subsequent disclosure of this information or as otherwise permitted by 12 C.F.R. Part 2 or F.S.A. 394.4615. A general authorization for the release of medical or other information is NOT sufficient for this purpose. Federal rules restrict any use of the information to criminally investigate or prosecute any alcohol or drug abuse patient. (42 C.F.R. 2.32). Florida law requires that any person, agency or entity receiving this information shall maintain such information as confidential and exempt from the provisions of the public records law. (F.S.A. 394.4615(6)). Any facility or private mental health practitioner who acts in good faith in releasing information pursuant to F.S.A. 394.4615 or other Florida Statutes is not subject to civil or criminal liability for such release.

School Based Services:
I/we further consent to the release and exchange of my child’s personally identifiable information with Medicaid’s fiscal agent, the school district’s Medicaid billing agent, and any representative of the Agency for Health Care Administration (AHCA) for the purpose of determining Medicaid eligibility status and billing for direct services. I/we understand that this billing will only occur if eligible services are delivered to my child during the school day by a qualified provider and my child is Medicaid eligible and covered under IDEA, now or in the future. I understand that I can withdraw my consent at any time by written notification to the School Board of St. Lucie County’s Department of Student Services/Medicaid Certified School Match Program.
