# Florida Teacher Preparation Programs: A Summary and Analysis of Program Performance 

Summary and Analysis of 2018 Annual Program Performance Reports Presented to the Florida Department of Education

January 2019

## Executive Summary

Evaluating and improving the effectiveness of classroom teachers has been a major area of focus of education policy over the last decade. The state of Florida has enacted and implemented numerous policies aimed at ensuring that all students have effective teachers, including policies that examine the quality of teacher preparation programs.

Florida has developed a system to support the continuous improvement of teacher preparation programs and hold them accountable for their own performance and the performance of the teachers they produce. The goal of this report is to provide comparative data from that system that can help programs improve their design and outcomes and to inform policymakers and consumers - school districts and prospective teacher candidates - about program strengths and weaknesses. Suggestions are also offered for consideration by the state to further develop and enhance the teacher preparation program accountability system.

This report is presented to fulfill the requirement articulated in section 1004.04, Florida Statutes, and detailed in State Board of Education Rule 6A-5.066, Florida Administrative Code, that the Florida Department of Education shall report the results of each approved teacher preparation program's annual progress on established performance measures as well as each program's current approval status. In accordance with the statute, this report must be made available to the Governor; the President of the Senate; the Speaker of the House of Representatives; the State Board of Education; the Board of Governors; the Commissioner of Education; Florida teacher preparation programs; school districts superintendents; and the general public.

This report reflects data from the 2018 Annual Program Performance Reports (APPRs), which generally correspond to the 2015-2016 school year.

To measure program performance, the Florida Department of Education reviews the following data for each program annually:

1. Placement rate of program completers into instructional positions in Florida public schools.
2. Rate of retention for employed program completers in instructional positions in Florida public schools.
3. Performance of students in pre-K through grade 12 who are assigned to in-field program completers on statewide assessments using the results of Florida's student learning growth formula.
4. Performance of students in pre-K through grade 12 who are assigned to in-field program completers aggregated by student subgroup.
5. Results of program completers' annual teacher evaluations.
6. Production of program completers in statewide critical teacher shortage areas.

Programs receive a performance score for each of the first five metrics on a scale of one to four, with four indicating the highest level of performance. The sixth metric, production of teachers in critical shortage areas, is a bonus category and not calculated into summative ratings unless programs receive the bonus.

Florida has 363 teacher preparation programs. To increase the amount of available performance data that can be considered, some similar programs within an institution are combined for accountability purposes. These aggregations result in the analysis of 296 programs in this report.

For the first time, this report also includes preliminary data and analysis from program site reviews, which provide additional information that will be used in determining whether programs are granted Continued Approval Status. Site visits look at program design and candidate performance in order to provide feedback for program improvement as well as ratings that can be used by the state for accountability purposes. To date, a small number of programs have had site visits, and the information included in this report is for informational purposes only.

Also new this year, the report includes data showing the performance of teacher candidates on Florida Teacher Certification Examinations.

## 2018 Florida Teacher Preparation Program Performance

## Overall Findings

- Three programs share the top ranking in the state of Florida for 2018: Mathematics program at Florida Atlantic University; Middle Grades Mathematics program at Indian River State College; and Middle Grades Mathematics program at Northwest Florida State College. This is the third year in a row that the Middle Grades Mathematics program at Indian River State College is the highest ranked program in the state. In the reporting years of 2010-2011 through 2015-2016, the Florida Atlantic program had 28 completers, the Indian River State College program had 66 completers, and the Northwest Florida State College program had 16 completers.
- At the elementary level, the Elementary Education/ESOL Endorsement/Reading Endorsement program at Florida A\&M University had the highest ranking in the state (165 completers).
- The highest ranked English Education or Reading program is the English/ESOL Endorsement program at Florida Atlantic University (98 completers).
- The highest ranked Mathematics programs are also the highest ranked programs in the state: Mathematics program at Florida Atlantic University; Middle Grades Mathematics program at Indian River State College; and Middle Grades Mathematics program at Northwest Florida State College.
- Due in part to the lack of applicability for some types of programs and availability of data for some metrics, only 76 of 296 programs ( 26 percent) have enough performance
data for their programs to receive a 2018 ranking. (Programs must have scores on at least four of the six performance metrics to be ranked; FDOE elected to require at least four subscores so that programs associated with student performance measures are highlighted.)
- Forty programs improved their summative scores between 2017 and 2018, while 29 programs' scores decreased.
- The Elementary Education/ESOL Endorsement program at the University of North Florida had the greatest increase in summative score, rising from a 2.0 in 2016 to a 3.4 in 2018.

## Individual Performance Metric Findings

- Only 190 of 296 programs received a placement rate score for 2018. Among the programs receiving a score, the average placement rate score was 2.98 , continuing an upward trend since 2015.
- Only 183 of 296 programs received a retention rate score for 2018. Among the programs receiving a score, nearly all programs received a score of 3.0 or 4.0. The average retention rate score was 3.4, the same as in 2016 and 2017.
- Just 81 of 296 programs received a score for student learning growth for 2018. The average program score for performance of students on statewide assessments was 2.91.
- Just one program in the state -- Indian River State College-Middle Grades Mathematics received the highest possible score for performance of students on statewide assessments. This program earned a perfect 4.0 for the third year in a row.
- Of the 81 programs receiving a score for student subgroup performance on statewide assessments, the average program score for 2018 was 2.58 .
- 237 out of 296 programs received a teacher evaluation score for 2018. The average score for annual teacher evaluations was 3.4, the highest average score yet on this metric.
- 31 out of 107 eligible programs ( 29 percent) had a higher number of completers than the prior year and received the critical teacher shortage bonus.
- Ten out of the 31 programs that earned the critical shortage area bonus received low scores for teacher placement.

## Introduction

Evaluating and improving the effectiveness of classroom teachers has been a major area of focus of education policy over the last decade. The state of Florida has enacted and implemented numerous policies aimed at ensuring that all students have effective teachers, including policies that examine the quality of teacher preparation programs.

Florida has developed a system to support the continuous improvement of teacher preparation programs and hold them accountable for their own performance and the performance of the teachers they produce. The goal of this report is to provide comparative data from that system that can help programs improve their design and outcomes, as well as to inform policymakers and consumers - school districts and prospective teacher candidates - about program strengths and weaknesses. ${ }^{1}$

This report is presented to fulfill the requirement articulated in section 1004.04, Florida Statutes, and detailed in State Board of Education Rule 6A-5.066, Florida Administrative Code, that the Florida Department of Education shall report the results of each approved teacher preparation program's annual progress on established performance measures as well as each program's current approval status. In accordance with the statute, this report must be made available to the Governor; the President of the Senate; the Speaker of the House of Representatives; the State Board of Education; the Board of Governors; the Commissioner of Education; Florida teacher preparation programs; school districts superintendents; and the general public.

This report is the 2018 edition, generally reflecting data corresponding to teacher preparation program completers employed in the 2015-2016 school year. ${ }^{2}$

For the first time, this year's report also includes preliminary data and analysis from program site reviews, which provide additional information that will be used in determining whether programs are granted Continued Approval status. Site visits look at program design and candidate performance in order to provide feedback for program improvement as well as ratings that can be used by the state for accountability purposes. To date, a small number of programs have had site visits, and the information included in this report is presented for informational purposes only. Also new this year, the report includes data showing the performance of teacher candidates on Florida Teacher Certification Examinations. (See Appendix H.)

After a brief overview of teacher preparation in Florida and the state's accountability system for teacher preparation programs, this report presents:

[^0]- Summative findings that rank the overall performance of programs with sufficient data;
- Analysis of each of the metrics used to measure program performance;
- Suggestions for consideration by the state on ways to further develop and enhance the accountability system; and
- Site review analysis and suggestions for consideration by the state as the site review process advances and becomes fully integrated into the accountability system.

## Teacher Preparation in Florida

There are three types of state-approved programs that lead to certification of new teachers in Florida: Initial Teacher Preparation Programs (ITPs), Educator Preparation Institutes (EPIs), and Professional Development Certification Programs (PDCPs).

Initial Teacher Preparation Programs are generally offered at postsecondary institutions and typically culminate in a bachelor's or master's degree. This is the more traditional pathway to a teaching license.

Educator Preparation Institutes provide an alternate route to teacher certification for prospective teachers including career changers and recent college graduates who already hold a bachelor's degree. EPIs are generally provided by postsecondary institutions.

Professional Development Certification Programs are an alternate route offered by school districts, charter schools and charter management organizations that allow teachers with temporary licenses to work as teachers of record while earning their full certification.

For 2018, there were 86 providers of teacher preparation programs in Florida. Per 6A-5.066, Florida Administrative Code, eligible providers of teacher preparation programs are Florida postsecondary institutions, private providers, school districts, charter schools, and charter school management organizations. Of the 86 providers, 33 are districts that run their own PDCP programs. ${ }^{3}$ All other providers are institutions of higher education (IHEs), including 33 public IHEs and 20 private IHEs.

[^1]FIGURE 1
Florida Teacher Preparation Providers

Florida has 363 teacher preparation programs ${ }^{4}$. Thirty-three are offered by local school districts, 65 by the Florida College System, 171 by the State University System, and 94 by private colleges or universities. ${ }^{5}$

Of these programs, 20 are Educator Preparation Institutes and 33 are district-run Professional Development Certification Programs. The overwhelming majority of programs in the state, 310, are Initial Teacher Preparation Programs.

FIGURE 2
Types of Teacher Preparation Programs
EPI 20

PDCP 33
ITP 310

## NUMBER OF PROGRAMS

The 310 Initial Teacher Preparation Programs cover a wide-range of subject matter, with the most commonly-offered program Elementary Education, which is offered by 47 providers.

[^2]FIGURE 3
Subject Areas of Initial Teacher Preparation Programs

*American Sign Language is an endorsement area.
$\dagger$ There is more than one program in the state that focuses on teaching hearing impaired students. Programs that also provide certification in elementary education were included in the elementary education category.

Florida is a national leader in developing an accountability system for its teacher preparation programs. While a number of states have begun to bring more transparency to the quality of teacher preparation, Florida has done more than most states to identify multiple measures that reflect program performance, establish rating scales to assess these measures, and share these data along with summative ratings with the public. ${ }^{6}$ Importantly, Florida's teacher preparation program accountability system is designed to evaluate at the program level, rather than evaluation of institutional-level performance. Data aggregated for all teacher candidates across multiple programs within an institution can mask significant differences in program performance. For example, while an elementary reading program at an institution may be very strong, its secondary mathematics program may be weak. Individualized program scores ensure that prospective students and school districts can make better decisions.

Although the state aims for program-level accountability, it does combine together data from certain programs to increase the amount of available data. For example, in certain cases graduate and undergraduate programs are combined, discrete science programs such as biology, chemistry or physics are combined, and discrete world language programs (e.g., French or Spanish) are combined.

To measure program performance, the FDOE reviews the following data for each program annually:

1. Placement rate of program completers into instructional positions in Florida public schools.
2. Rate of retention for employed program completers in instructional positions in Florida public schools. ${ }^{7}$
3. Performance of students in pre-K through grade 12 who are assigned to in-field program completers on statewide assessments using the results of Florida's student learning growth formula.
4. Performance of students in pre-K through grade 12 who are assigned to in-field program completers aggregated by student subgroup.
5. Results of program completers' annual teacher evaluations.
6. Production of program completers in statewide critical teacher shortage areas.
[^3]FIGURE 4
2018 APPR Performance Metric Timeframe and Minimum Requirements

| Performance <br> Criterion | Data Timeframe | Minimum Number of Completers <br> for Inclusion |
| :--- | :--- | :--- |
| Placement rate | Results from completers <br> employed in 2014-2015 or 2015- <br> 2016 | At least three completers in the selected <br> cohort time period of 2013-2014 |
| Retention rate | Results from completers <br> employed in 2011-2012 or 2012- <br> 2013 and employed within the 5- <br> year period after initial hire | At least three completers in the selected <br> cohort time period of 2010-2011 |
| Student <br> performance on <br> statewide <br> assessments | Results from completers <br> employed in 2015-2016 | At least two completers who are <br> employed in-field and are from the <br> cohort time period of 2012-2013, 2013- <br> 2014 and 2014-2015 |
| Statewide <br> performance by <br> subgroups | Results from completers <br> employed in 2015-2016 | At least two completers who are <br> employed in-field and are from the <br> cohort time period of 2012-2013, 2013- <br> 2014 and 2014-2015 |
| Teacher evaluation | Results from completers <br> employed in 2015-2016 | At least two completers who are <br> employed in-field and are from the <br> cohort time period of 2012-2013, 2013- <br> 2014 and 2014-2015 |
| Critical teacher <br> shortage | Results from total number of <br> completers in 2015-2016 <br> compared to 2014-2015 | At least two completers in each year |

Programs receive a performance score for each of the first five metrics on a scale of one to four, with four indicating the highest level of performance. (The full rubric can be found in Appendix A.) The sixth metric, production of teachers in critical shortage areas, is a bonus category and not calculated into summative ratings unless programs receive the bonus.

Summative ratings are calculated by averaging all performance scores received by a program. For programs receiving the critical shortage bonus, the five other scores are weighted at 0.8 and the shortage bonus weighted at 0.2 to calculate the summative rating score.

Florida teacher preparation programs are approved for five-year periods. At the end of each five-year period, FDOE examines the annual summative rating scores for each of the program's annual program performance reports, along with data and findings collected during a site visit
review. A formula ${ }^{8}$ is used to determine a Continued Approval Summative Score (CASS) on a scale of 1.0 to 4.0, and continued approval is granted to programs deemed to be providing satisfactory preparation to new teachers.

## 2018 Florida Teacher Preparation Program Performance

Finding: Only 76 out of 296 programs ( 26 percent) have enough performance data for their programs to receive a 2018 ranking.

As previously noted, some similar programs within an institution are combined to increase the amount of available performance data that can be considered. These aggregations result in the analysis of 296 programs in this report. (See Appendix B for program aggregations.)

For the purposes of this report, programs must have a minimum of four subscores to be ranked. Only 76 programs have the minimum of four subscores necessary for their summative ratings and resulting rankings to be presented here. Thus, rankings are provided for just 26 percent of analyzed programs. This is due in large part to the lack of student growth data for teachers in most programs. Student growth data for EPIs and PDCPs will not be available until spring 2019. FDOE elected to require at least four subscores so that programs associated with student performance measures are highlighted.

The percentage of ranked programs is higher than in 2017, when only 23 percent of programs were ranked. However, this increase is a result of the total number of programs being lowered from 344 last year to 296 this year as FDOE has worked to remove inactive programs from its roster. The actual number of programs ranked is slightly lower than last year, when 78 programs received rankings.

[^4]
## FIGURE 5

## Performance Metrics per Program

Finding: Three programs share the top ranking in the state of Florida for 2018: the Mathematics program at Florida Atlantic University; the Middle Grades Mathematics program at Indian River State College; and the Middle Grades Mathematics program at Northwest Florida State College. The Middle Grades Mathematics program at Indian River State College is the top-ranked program for the third year in a row.

| 60 | Flagler College | Elementary Education/ Exceptional Student Education/ ESOL/Reading | 2.6 | 247 |
| 60 | Flagler College | Elementary Education/ESOL/ Reading | 2.6 | 278 |
| 60 | Florida SouthWestern State College | Elementary Education/ESOL/ Reading | 2.6 | 472 |
| 60 | Florida State University | Elementary Education/ESOL/ Reading | 2.6 | 520 |
| 60 | Jacksonville University | Elementary Education/ESOL/ Reading | 2.6 | 61 |
| 60 | Saint Leo University | Middle Grades English/ESOL/ Reading | 2.6 | 53 |
| 60 | University of North Florida | Mathematics | 2.6 | 48 |

| Rank | Institution | Program | Summative Score | Number of Completers ${ }^{9}$ |
| :---: | :---: | :---: | :---: | :---: |
| 60 | University of South Florida | Elementary Education/ESOL | 2.6 | 1,638 |
| 68 | Chipola College | Mathematics | 2.5 | 16 |
| 68 | Daytona State College | Elementary Education/ ESOL/Reading | 2.5 | 240 |
| 70 | Nova Southeastern University | Elementary Education/ ESOL/Reading | 2.4 | 162 |
| 70 | Palm Beach Atlantic University | Elementary Education/ESOL | 2.4 | 78 |
| 70 | Southeastern University | Elementary Education/ESOL/ Reading | 2.4 | 125 |
| 70 | University of Miami | Elementary Education/ Exceptional Student Education/ ESOL/Reading | 2.4 | 56 |
| 70 | University of West Florida | Elementary Education/ESOL/ <br> Reading | 2.4 | 267 |
| 75 | Bethune-Cookman University | Elementary Education/ESOL/ Reading | 2.3 | 40 |
| 76 | University of Central Florida | Elementary Education/ESOL/ Reading | 2.2 | 2,819 |

Full program ratings, including all subscores, can be found in Appendix C.

The average summative rating for ranked programs in 2018 is 3.0 , unchanged from the mean summative rating in 2017 and 2016.

Notably, some of the largest programs in the state generally have below average performance ratings. The single largest program, the Elementary Education/ESOL/Reading program at the University of Central Florida, with over 2,800 completers, has the lowest summative rating among all ranked programs for the second year in a row. Two other large programs, the Elementary Education/ESOL/Reading program at Florida Atlantic University and the Elementary Education/ESOL program at the University of North Florida, have markedly improved their scores from last year (see Figure 13).

FIGURE 7
Largest Programs Ratings and Rankings

| Institution | Program | Number of <br> Completers | Summative <br> Score | Rank |
| :--- | :--- | :--- | :--- | :--- |
| University of Central Florida | Elementary Education/ <br> ESOL/Reading | 2,819 | 2.2 | 76 |
| Florida Atlantic University | Elementary Education/ <br> ESOL/Reading | 1,826 | 3.2 | 23 |
| University of South Florida | Elementary Education/ <br> ESOL | 1,638 | 2.6 | 60 |
| Florida International University | Elementary Education/  <br> ESOL/Reading 978 | 2.6 | 50 |  |
| University of North Florida | Elementary Education/ | 846 | 3.4 | 13 |

Of the 86 providers of teacher preparation programs in Florida, 37 providers are represented in the rankings. Eighteen providers operate multiple ranked programs. Institutional summaries of ranked programs can be found in Appendix D.

Finding: At the elementary level, Florida A\&M University, Elementary Education/ESOL Endorsement/Reading Endorsement program has the highest overall rating with a 3.6 summative score.

FIGURE 8
2018 Rankings Summary Table
Elementary Education Programs

| Rank | Institution | Program | Summative <br> Score | Number of <br> Completers |
| :---: | :--- | :--- | :--- | :---: |

Full program ratings, including all subscores, can be found in Appendix E.

The average summative score for elementary education programs is 2.8 , lower than the average summative score of 3.0 for all programs. The average score for elementary programs has also dropped from an average of 2.9 last year, although the average for all programs is unchanged.

Finding: The highest ranked English Education or Reading program is the English/ESOL Endorsement program at Florida Atlantic University, with a summative score of 3.7.

Full program ratings, including all subscores, can be found in Appendix G.
The average rating for mathematics programs is 3.3, higher than the average for all programs of 3.0.

Figure 11
Average Summative Score by Program Type

## Progress Trends

Finding: Forty programs improved their summative scores between 2017 and 2018, while 29 programs' scores decreased.

FIGURE 12
Change in Program Performance Scores 2017-2018

Finding: The Elementary Education/ESOL Endorsement program at the University of North Florida had the greatest increase in summative score, rising to a 3.4 in 2018 from a 2.0 in 2017. Last year, this program was among the programs with the greatest decrease. This year, the Elementary Education/ESOL program at Palm Beach Atlantic University had the greatest decrease of any program, dropping from a 3.6 in 2017 to a 2.4 in 2018.

The summative scores of four programs changed by one point or more point on the four point scale between 2017 and 2018. Three of these programs increased by one point or more, while one decreased by more than one point. At the University of South Florida - St. Petersburg, the
elementary education program increased its score by a full point, while the elementary education program that includes exceptional students dropped by almost a full point.

## Analysis of Performance Metrics

## Performance Metric 1: Placement Rate

Placement rate refers to the number of program completers reported annually as employed in a full-time or part-time instructional position in a Florida public school district in either the first or second academic year subsequent to program completion. ${ }^{11}$

This analysis does not look at the reasons an individual program has a high or low placement rate. In general, a high placement rate indicates that program graduates have little difficulty finding employment. A low placement rate may indicate that there is little demand for the new teachers produced by a given program, which could be a reflection of the perceived quality of

[^7]new teachers trained by that program or could result from little demand in general for teachers of particular grades and subjects or regional variations in hiring. It is also possible that a low placement rate indicates that a program's graduates are working as teachers out of state or in private schools or other settings not tracked by their institutions.

Scoring for this metric addresses the implicit differences in demand for certain types of teachers by comparing each program's placement rate to the average placement rate for all programs producing teachers of those grades and subjects. Programs producing elementary teachers are compared to the average placement rate for elementary teachers; programs producing secondary mathematics teachers are compared to the average placement rate for secondary mathematics teachers.

FIGURE 15

## Placement Rate Scoring Rubric

Level 4 Placement rate is at or above the 68th percentile of all equivalent programs across the state.

Level 3 Placement rate is at or above the 34th percentile and below the 68th percentile of all equivalent programs across the state.

Level 2 Placement rate is at or above the 5th percentile and below the 34 th percentile of all equivalent programs across the state.

Level 1 Placement rate is below the 5th percentile of all equivalent programs across the state.

Finding: 190 out of 296 programs ( 64 percent) received a placement rate score for 2018. Among the programs receiving a score, the average placement rate score was 2.98, continuing an upward trend since 2016.

FIGURE 16
Average Placement Rate Score

FIGURE 17

## Distribution of Placement Rate Scores

Placement rate is not applicable to Professional Development Certification Programs, since candidates in these programs are already employed as teachers. This contributes to the high percentage of programs not rated on this metric, although many non-PDCPs are also not rated. Although the overall percentage rated is up from last year, this is a result of removing inactive or defunct programs from the roster and not due to more programs receiving a rating.

Nearly half (47 percent) of the programs that received the highest score for new teacher placement placed less than ten teachers. In addition, given the national focus on the need for more STEM (science, technology, engineering, and mathematics) teachers, programs producing these teachers do not appear more likely to have higher placement rates than programs producing other types of teachers.

FIGURE 19
Subject Matter of Programs Receiving Highest Placement Scores

FIGURE 20
Average Score for Placement Rate by Program Type

AVERAGE SCORE FOR PLACEMENT RATE

FIGURE 21
Placement Rate Score Distribution by Program Type

> Finding: Initial teacher preparation programs at private colleges and universities account for nearly half of programs that should be rated on this metric but
> are not.

## Performance Metric 2: Retention Rate

Retention rate is defined as the average number of years that program completers are employed in a full-time or part-time instructional position in a Florida public school district at any point each year in a five-year period following initial employment in either of the two subsequent academic years following program completion. ${ }^{12}$

Retention rate is an important complement to placement rate, in that it goes beyond looking at whether new teachers get hired to looking at whether they stay. Nationally, new teacher attrition is a chronic concern, particularly in high-needs schools, ${ }^{13}$ and while there are certainly factors beyond the quality of their preparation that impact teacher turnover, research has shown that some aspects of the education and preparation that beginning teachers received are significantly associated with their attrition. ${ }^{14}$

[^8]FIGURE 22

## Retention Rate Scoring Rubric

Level 4 The average number of years employed in the 5-year period following initial placement is 4.5 years or more.

Level 3 The average number of years employed in the 5-year period following initial placement is 3 years to less than 4.5 years.

Level 2 The average number of years employed in the 5-year period following initial placement is 2 years to less than 3 years.

Level 1 The average number of years employed in the 5-year period following initial placement is less than 2 years.

Finding: Only 183 out of 296 programs received a retention rate score for 2018. All but one rated program received a score of 3.0 or 4.0. The Elementary Education/ESOL
Endorsement program at Florida Atlantic University was the sole program to receive a score of 2.0. The average retention rate score was 3.4, the same as in 2016 and 2017.

AVERAGE SCORE FOR RETENTION RATE

Finding: The percentage of Educator Preparation Institutes and Professional
Development Certification Programs earning the top score for retention is notably smaller than other types of programs.

FIGURE 27
Retention Rate Score Distribution by Program Type

Private IHE

State College

State University

If the available performance data on retention rate are accurate, there is a strong indication that Florida has a much lower rate of new teacher attrition than the national numbers suggested by the National Center for Education Statistics and other published reports ${ }^{16}$ or conventional wisdom, which generally indicate significant numbers of new teachers leaving in their first few years.

[^10]It would not appear to be the case that the high performance ratings on this metric result from a low bar in scoring. To earn a score of 4.0, programs must have average retention among their graduates of 4.5 out of 5 years, which appears to set a rigorous standard.

As with placement rate, data are not available for many programs. It is possible that the inclusion of that data would result in a distribution that tracks more closely with the conventional narrative about new teacher attrition. Or perhaps the conventional narrative is missing a key part of the story. These data show that very high percentages of new teachers are employed in Florida public schools after five years. What we don't know is whether these teachers have had multiple positions over those five years. If teachers in fact move across schools and districts in search of a good fit, then there is more of an underlying retention issue than can be seen from this metric. FDOE has indicated plans to look more closely at this issue.

It is also possible that Florida's teacher preparation programs have begun to produce teachers that are much more likely to be retained in their initial placements than even just a few years ago, mitigating a vexing issue that other states still struggle to address. These results call for further, deeper analysis that would be of great use to the broader field. Of particular interest is the lower performance of EPIs and PDCPs compared to other programs, which is perhaps unexpected given that these candidates are already in place as teachers when they begin their training.

## Performance Metric 3: Performance of Pre-K-12 Students on Statewide Assessments

This metric evaluates the extent to which programs' graduates achieve learning gains for their students once they are new teachers in the classroom. Performance of new teachers' students is assessed through the student learning growth formula that is used in teacher evaluation systems as required in section 1012.34, Florida Statutes.

The teacher preparation program accountability system looks at new teacher classroom performance through three specific lenses: student learning gains as measured in this indicator; student learning gains for specific student subgroups (see Performance Metric 4), and overall teacher evaluation results, which include classroom observations and student learning performance, as well as other measures used by districts (see Performance Metric 5).

Student learning growth scores are calculated through a value-added model (VAM), designed to measure the amount of a teacher's contribution to student learning. Florida's VAM model calculates a score for each teacher that reflects the average amount of learning growth of the teacher's students above or below the expected learning gains of similar students in the state. ${ }^{17}$

[^11]Program scores for this metric are based on the performance of students assigned to in-field ${ }^{18}$ program completers from the previous three-year period who received a student learning growth score from the most recent academic year for which results are available. The scores of all such program completers are averaged. The score for this metric takes into account both the average student learning growth score and the confidence interval, which considers the margin of error associated with that score.

FIGURE 28

## Performance on Statewide Assessments Scoring Rubric

Level 4 The probability that the average student learning growth among students taught by program completers exceeds the expectations for those students is $\geq 95$ percent.

The probability that the average student learning growth among students taught by program completers exceeds the expectations for those students is < 5 percent; AND the probability that the average student learning growth among students taught by program completers falls short of the expectations for those students expectations is < 5 percent.

Not calculated

Level 1 The probability that the average student learning growth among students taught by program completers falls short of the expectations for those students is $\geq 95$ percent.

This performance metric is currently not applicable to Educator Preparation Institutes and Professional Development Certification Programs. Data for these programs will be available and considered in the spring 2019 report. Further, not all initial teacher preparation programs will have student learning growth scores. Only programs whose graduates teach courses that have associated statewide assessments in English language arts and mathematics will have the scores needed to evaluate this performance metric.

Finding: Just 81 programs received a score for student learning growth for 2018. The average program score for performance of students on statewide assessments was 2.91, continuing an upward trend since 2016.

[^12]FIGURE 29
Average Performance by Students on Statewide Assessments Score

FIGURE 30
Distribution of Performance by Students on Statewide Assessments Score

Most of the 162 initial teacher preparation programs that are not rated are in subject areas where there are no statewide assessments. About 30 of these programs are in subject areas including English and mathematics where corresponding statewide assessment data would be expected, although new teachers from these programs may be teaching grade levels in which no such assessment is given. Of particular concern is that no programs primarily focused on exceptional student education have scores on this metric, even though students with disabilities are expected to meet the same standards as typical students and all but a small percentage of students with disabilities are expected to take statewide assessments.

Finding: Indian River State College - Middle Grades Mathematics is the only program in the state to receive a 4.0 for student learning. This program earns the top score for the third year in a row.

AVERAGE SCORE FOR STUDENT LEARNING GROWITH

FIGURE 32

## Distribution of Student Learning Growth Scores by Program Type

## Performance Metric 4: Performance of Student Subgroups on Statewide Assessments

This metric considers a different aspect of teachers' contribution to student learning, specifically the performance of student subgroups. The intent is to measure how well the teacher preparation program prepares new teachers to work with a diverse population of students in a variety of settings in Florida schools, including economically disadvantaged students, students from major racial and ethnic groups, students with disabilities, and students with limited English proficiency.

To calculate the learning gains of students by subgroup, teacher VAM scores are calculated and aggregated for the following categories: Caucasian, African-American, Hispanic, Asian, Native American, students eligible for free or reduced lunch, students with disabilities, and English language learners. Unlike the previous metric, scoring for performance of student subgroups is not based on actual VAM scores. Rather, this metric considers the average student learning growth results by each subgroup as compared to the statewide average for these subgroups for all program completers with VAM scores. These percentages are compared to the statewide percentages to determine the number of subgroups that met expectation or exceeded the statewide average to arrive at the program score.

FIGURE 33
Performance by Student Subgroups on Statewide Assessments Scoring Rubric

Level $4 \quad$ At least 75 percent of the subgroups meet or exceed the state standard for performance.

Level 3 At least 50 percent, but less than 75 percent of the subgroups meet or exceed the state standard for performance.

Level 2 At least 25 percent but less than 50 percent of the subgroups meet or exceed the state standard for performance.

Level $1 \quad$ Fewer than 25 percent of the subgroups exceed the state standard for performance.

As with the previous metric, student subgroup data are not yet available for EPIs and PDCPs. Subgroup data will not be available until Spring 2019.

Finding: Of the 81 programs receiving a score for student subgroup performance on statewide assessments, the average program score for 2018 was 2.58.

FIGURE 34

AVERAGE SCORE FOR SUBGROWTH STUDENT LEARNING GROWTH

Distribution of Subgroup Student Learning Growth Scores by Program Type

More than half of such programs that were rated received a score of 1.0 or $\mathbf{2 . 0}$, meaning that teachers prepared by these program had less than 50 percent of student subgroups meeting state standards.

## Performance Metric 5: Teacher Evaluations

This metric considers the results of annual teacher evaluations from the most recent academic year for program completers from the previous three-year period. Florida requires that all teachers receive an annual evaluation that results in a rating of highly effective; effective; needs improvement (for teachers teaching more than three years) or developing (for teachers with experience of three years or less); or unsatisfactory. ${ }^{19}$

Local districts develop their own teacher evaluation systems consistent with state law and guidelines. Growth or achievement data for the teacher's students and observation of instructional practice must each comprise at least one third of the evaluation. Other measures can be added at districts' discretion.

The inclusion of this metric in addition to the metrics looking solely at student learning gains is important for two reasons. First, this metric allows for consideration of other factors used by districts to evaluate teacher performance, including classroom observations. This metric also

[^13]allows consideration of performance for many more teachers who do not teach grades or subjects associated with statewide assessments.

Scoring for this metric is based on the percentage of teachers receiving highly effective and effective ratings.

FIGURE 39

## Teacher Evaluation Scoring Rubric

Level 4 At least 30 percent of the program's completers received a highly effective rating and 90 to 100 percent of the program's completers received either highly effective or effective ratings, and no completers were rated unsatisfactory.

Level 3 Program did not meet criteria for Level 4, but at least 80 percent of the program's completers received either highly effective or effective ratings, and no completers were rated unsatisfactory.

Level 2
Program did not meet criteria for Level 3, but at least 60 percent of the program's completers received a highly effective or effective rating and no more than 5 percent (more than one (1) for $\mathrm{n}<20$ ) of the program's completers were rated unsatisfactory.

Level 1 Program did not meet criteria for Level 2, 3 or 4.

Finding: 237 out of 296 programs received a teacher evaluation score for 2018. The average teacher evaluation score was 3.4 , the highest score yet on this metric.

Important context for analyzing this metric is that nearly all teachers in Florida receive an effective or highly effective rating on their evaluation. State data show that over 98 percent of teachers received a rating of effective or highly effective. ${ }^{20}$ Given the lack of differentiation among the underlying data, the high program scores are not surprising. The state may want to consider whether programs scoring less than a 3.0 are in need of technical assistance or intervention. The three programs earning a 1.0 on this metric - Chipola College, Mathematics; Florida Southern College, English; and the combination of world languages programs at the University of South Florida - may be particularly in need of intervention.

## Bonus Metric: Critical Shortage Areas

The final criterion in Florida's teacher preparation accountability system considers whether programs are producing teachers in critical shortage subject areas. Since by design many programs are not preparing teachers for these subject areas, this metric is not used as the other
performance metrics are to evaluate all programs. Instead, eligible programs can earn bonus points that impact their summative scores and rankings. ${ }^{21}$

Critical teacher shortage areas are determined and published each year by the State Board of Education in accordance with Rule 6A-20.0131, Florida Administrative Code. For the school year 2015-2016 ${ }^{22}$ the following were identified as critical shortage areas, in rank order:

- English
- Exceptional Student Education
- Reading
- Foreign Language
- English for Speakers of Other Languages (ESOL)
- Science
- Mathematics

Based on these identified areas, 107 of the 296 programs analyzed were eligible for the critical teacher shortage area bonus. To earn the bonus, eligible programs must have a minimum of two program completers and increase the number of program completers compared to the prior year.

Finding: 31 out of 107 eligible programs ( 29 percent) had a higher number of completers than the prior year and received the critical teacher shortage bonus.

The practice of combining multiple programs into a single unit of analysis for accountability purposes complicates the ability to accurately understand whether teacher preparation programs are helping to address chronic shortages. In particular, treating 'science' as a broad shortage category may mask important differences among science disciplines and reward programs and institutions that are doing little to contribute to the production of new teachers in key shortage subjects.

Further, the scoring for this metric treats all net increases equally, with no differentiation for programs that produce significantly greater numbers of new teachers or the percentage increase relative to overall program size. Seven of the 31 programs receiving the critical shortage bonus produced just one additional teacher compared to the prior year.

> Finding: Ten out of the 31 programs ( 32 percent) that earned the critical shortage area bonus received low scores for teacher placement.

One third of programs that received the critical teacher shortage area bonus received a score of 2.0 or lower on the teacher placement metric, which means the employment rate of their new teachers is in the bottom third of similar programs in the state. The implication is that despite their presumed production of much needed teachers, program completers from these programs were not in demand by hiring school districts.

One possible explanation is that school districts are unaware of the availability of new teachers from these programs, which may be located in different parts of the state than those from which particular districts typically recruit new teachers. Or graduates from these programs may be recruited or seek employment out of state, in which case the state may want to consider strategies to keep these much needed new teachers in Florida. Another possible explanation is
that school districts do not consider teachers from these programs well prepared for the classroom, and in fact, several of the shortage area programs with low placement scores have rankings in the bottom quartile of all programs. But others are ranked quite highly. A closer look at what can be done to get these teachers to the Florida schools that need them may be in order.

FIGURE 48

    number OF Programs
```

The critical teacher shortage area bonus is currently not applicable to Educator Preparation Institutes and Professional Development Certification Programs until the 2018-2019 academic year. Because those programs by design may include teachers of varying grades and subjects, a separate set of business rules may be needed to determine their eligibility and production of teachers in shortage areas.

## Considerations

This section of the report offers Florida suggestions for the state's consideration to further advance the architecture of its teacher preparation program accountability system and the value and usefulness of the information it provides. These considerations are offered with full recognition and appreciation that Florida is among the first states to develop and implement a robust teacher preparation accountability system, and there are certain to be unanticipated challenges when blazing a new trail. Further, there are undoubtedly tradeoffs and issues of context, capacity, and resources that come into play as the state reflects on the feasibility of these ideas.

## 1. Increase the number of programs that can be ranked by addressing the causes of unscored metrics and reevaluating the number of subscores required.

This report includes rankings for only 76 out of 296 programs. This is a decrease from last year, when 78 programs were ranked. The percentage of programs ranked has increased, as FDOE has commendably worked to remove inactive or defunct programs from its books. But the actual number of programs evaluated is down slightly for each performance metric, a worrying trend for the health and stability of the accountability system.

The number of ranked programs should increase when student learning data becomes available for EPIs and PDCPs, but the total is likely to remain a minority as long as programs must have student learning data to be ranked. Given that the teacher evaluation metric includes an alternate measure of student learning appropriate to that subject area when a VAM score is not available, the state may want to consider giving additional weight to the evaluation metric for programs that will never have a VAM score and allowing such programs to be ranked with only three subscores. If programs with three subscores were included this year, nearly 100 additional programs would be ranked, more than doubling the total.

Further, there are large numbers of programs that are not scored for all metrics that go beyond the phasing-in of certain metrics for EPIs and PDCPs. For example, the number of programs receiving a score for teacher evaluation - a metric that should apply to all programs - has declined from 344 in 2015 to 237 this year, a decrease of more than 30 percent. Identifying and addressing the causes of why programs are not scored - whether the result of business rules for scoring that exclude significant numbers of programs or unavailable data -- will improve the viability of the overall system. Fifty-one programs included in this year's analysis have zero subscores. Some of these may be new or very small programs, but the state should continue to identify inactive programs and remove them from data files so they do not reflect negatively on the system as whole.

FIGURE 50
Percentage of Programs Scored Per Metric

|  | Total Number of Programs Rated |  | Percentage of Total Programs Rated |  | Percentage of Applicable Programs Rated |  | Notes |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2017 | 2018 | 2017 | 2018 | 2017 | 2018 |  |
| Placement Rate | 197 | 190 | 57\% | 64\% | 64\% | 72\% | Not applicable to PDCPs |
| Retention Rate | 187 | 183 | 54\% | 62\% | 54\% | 62\% |  |
| Student Learning Growth/Student Learning Growth by Subgroup | 86 | 81 | 25\% | 27\% | $\sim 35 \%$ | $\sim 40 \%$ | Not applicable to PDCPs and EPIs this year; not applicable to ITPs in grades or subjects without statewide assessments |
| Teacher Evaluation | 251 | 237 | 73\% | 80\% | 73\% | 80\% |  |

2. Evaluate data quality and consider alternative weighting formulas.

The current formula treats all performance metrics equally in the calculation of summative scores. Yet some indicators may be providing more high quality data than others and some are clearly providing more differentiation among programs than others.

In addition, the rubrics for the metrics are not consistently rigorous. The retention rate rubric appears to be quite rigorous, requiring a minimum average retention rate of three years to earn a score of 3.0. At the opposite end of the spectrum, to earn a 3.0 on the student learning subgroup measure, a program's teachers need only to have positive learning results for 50 percent of student subgroups. While there may be legitimate reasons for some metrics to be evaluated with a lighter touch, it is worth considering whether equal weighting is warranted.

Different weighting may also be warranted for programs that will never have certain metrics. In particular, as noted above, weighting the teacher evaluation metric more heavily for programs in grades or subject areas that do not have statewide assessments would increase the emphasis on teachers' classroom performances, including the measures of student learning other than statewide assessments that are used for those teachers. Even with teacher evaluation results in Florida showing relatively little differentiation among
teacher performance at present, there are still clear differences in program ratings that suggest this metric can be important in identifying outliers, particularly for programs that do not have other results that reflect the performance in the classroom of program completers and their students.

It may also be interesting to collect data that would allow for the further exploration of certain metrics, for informational if not accountability persons. For example, the high level of performance on the retention metric begs analysis of the underlying question of whether new teachers are employed in the same positions over their first five years of employment. Some programs may do markedly better jobs than others in preparing teachers to thrive in a variety of settings or in helping teacher candidates to identify which environments will suit them best.

FIGURE 51
Distribution of Performance Metric Scores

3. Modify teacher preparation program accountability system business rules that may make resulting data less meaningful.

There are several ways the system can evolve to provide more reliable and useful information about preparation programs. First, although the system is admirably designed at the program rather than institution level, in many cases discrete programs are combined together. Of the 296 programs in this analysis, 32 are aggregates of multiple programs. The combinations include undergraduate and graduate programs in the same grade/subject area; discrete sciences (e.g., biology, chemistry and physics); and world languages. While these aggregations increase the availability of program data, they do so at the risk of concealing important differences in program performance. The coursework and training of teachers in undergraduate and graduate programs is quite different; there is little reason to assume program outcomes would be identical. Similarly, if an institution's chemistry teachers are in great demand but its biology teachers much less so, that cannot be seen in the current analysis. These are important tradeoffs to consider. Further, some of these programs are quite large, begging the question as to whether the aggregation is necessary or appropriate. For example, the graduate and undergraduate Elementary Education programs at the University of South Florida are treated as a single entity by the accountability system, although the programs report several hundred completers each year. Similarly, the six-year completer total for the graduate and undergraduate Elementary Education programs at Florida Atlantic University is close to 2,000 .

Second, rounding summative scores to the hundredths rather than the tenths place would allow for more illustrative comparisons. With only a four point scale, rounding to a single decimal place masks potentially meaningful differentiation between programs. It is likely there would be far fewer ties in the ranking tables if an additional decimal place was presented. It is also likely that in some cases rounding to only the tenths place nullifies the impact of the critical teacher shortage area bonus metric. Current plans indicate the next APPR in 2019 will include rounding to the hundredths place.

Finally, the state should consider ways to lessen the time lag in presenting these results to policymakers and the public. Most of the data that underpin this report are from the 20152016 school year, making them more than two full academic years old. While there are clearly complexities in collecting and evaluating these data, the lag impacts the overall utility to the field.
4. Further develop a dissemination strategy that ensures these findings reach the intended audiences.

Florida has dedicated significant resources to the development and implementation of its teacher preparation program accountability system. A dissemination strategy that goes beyond the specific delivery requirements articulated in the authorizing strategy can help
maximize the reach and impact of the findings. In particular, it would be helpful to make the findings more accessible on the state website in a manner that also provides direct links to more information about individual programs. At present, users can individually download this overview report or annual program performance reports. Presenting both these overall findings and data about specific programs in an interactive database would allow users to look across programs and cross reference data points much more easily.

## Site Visits

For the first time, this year's report includes data and analysis of the site visit reviews that are conducted as part of Florida's program accountability system. Programs are visited and reviewed once during their five-year approval period, and the score from their site review is one component of their Continued Approval Summative Scores. In order to calculate the Continued Approval Summative Score, the weights for each component of the continued approval summative score are 50 percent for the APPR Average Summative Rating, 20 percent for Continued Approval Site Visit Rating, and 30 percent for the Evidence of Programmatic Improvement Rating. ${ }^{23}$

Site visits serve both a formative and summative purpose. They provide programs with an external critique that identifies strengths and challenges and offers specific recommendations for program improvement and growth. In addition to information about particular programs, they also provide state officials with information about collective strengths and weaknesses across programs, which may impact state progress and plans for student outcomes and may point toward a need for technical assistance or regulatory action. Continued Approval Summative Scores will offer school districts, teacher candidates, policymakers and the public a holistic view of both the inputs and outcomes of the programs preparing the state's teachers.

The Florida Department of Education began piloting site visits in fall 2015, in partnership with Teacher Preparation Inspections-US (TPI-US), an organization that conducts program reviews. ${ }^{24}$ Since the analysis in this year's report reflects some programs' initial site review experiences, scores and other information are provided only in the aggregate, and not connected to individual programs. Future reports will include specific site visit scores along with performance metrics.

To date, $22^{25}$ institutions have had site visits. These initial site visits have focused on elementary education programs since the vast majority of institutions have such programs (or similar ones) and they are considered representative of all teacher preparation programs across the institution. Site visits explore the actual preparation and training teacher candidates receive through triangulation of data including, but not limited to (1) review of course syllabi and other course documents as well as course observations; candidate data including admission criteria and demographics; survey or other performance data collected by the program; and data and feedback related to teacher candidate observations; (2) interviews with program leadership and faculty; clinical placement supervisors; and administrators and mentor teachers from clinical placement sites; and teacher candidates; and (3) observation of teacher candidates.

[^16]Of the 22 institutions that have had site visits, four institutions had multiple reviews as part of their participation in the Centers of Excellence in Elementary Teacher Education (EXCEED) initiative. Part of Florida's Race to the Top programming, EXCEED awarded discretionary grants to institutions of higher education to partner with a local school district and an organization specializing in evidence-based educator supports to improve and/or enhance elementary teacher candidates' content knowledge and field experiences. The institutions that received EXCEED grants - Florida Atlantic University, Stetson University, St. Petersburg College, and the University of Florida, had multiple site visits between 2015 and 2017. For the purposes of this analysis, only the scores for the EXCEED grantees' most recent reviews were used in calculating averages for all 22 institutions. An additional summary is presented below that takes a closer look at the site reviews for these four programs.

The site reviews use an inspection framework ${ }^{26}$ developed by TPI-US that includes four areas of review:

- Quality of selection for teacher candidates
- Quality of content knowledge and teaching methods
- Quality of clinical placement, feedback, and candidate performance
- Quality of program performance management

In pilot inspections that began in 2015, programs were not scored on the selection and/or content knowledge/teaching methods indicators, although analysis was conducted and feedback provided. As of fall 2018, all site reviews include all four areas, although feedback on quality of selection is provided for informational purposes only.

Each inspection area is rated on a scale of 1 to 4 . Grade 4 is strong; grade 3 is good; grade 2 is weak; and grade 1 is inadequate. The site visit report provides detailed findings and recommendations for each area, as well as for the program as a whole.

## Quality of selection for teacher candidates

The quality of selection looks at the process and criteria that the program uses to determine which candidates will be admitted. While there is no magic formula for determining which candidates will become highly effective teachers, a thoughtful process that considers academic background and dispositions among other factors is essential to program success and the health of the teaching profession. The framework for quality of selection specifically addresses these questions:

- What principles, criteria, and recruitment/selection practices drive the selection of program applicants?

[^17]- What is the quality, as determined by pre-selection GPA and/or standardized test scores, of recent cohorts?
- What efforts are underway to make program candidates and program completers more representative of the student population of the schools and/or district(s) served by the program?

Quality of selection has only been reviewed and scored during the pilot phase, with 10 programs receiving an informational rating. The average program rating was 2.4 , showing that all programs have room for growth in their selection processes.

FIGURE 52

## Distribution of Quality of Selection of Teacher Candidates Scores

## Quality of Content Knowledge and Teaching Methods

The quality of content knowledge and teaching methods considers how well the program ensures that teacher candidates have the requisite content knowledge and teaching skills they will need. Since site visits to date have focused primarily on elementary programs only, the framework covers the wide range of subject matter and methods an elementary teacher is responsible for in her classroom. The framework for quality of content knowledge and teaching methods specifically addresses the following questions:

- How does the program ensure individual teacher candidates have a secure knowledge of their content (especially Scientifically-Based Reading Instruction, Math, other subjects in elementary programs)?
- How does the program ensure teacher candidates are well equipped with key teaching techniques and methods (particularly classroom management, assessment, differentiation, academic feedback, questioning skills) to bring about advancements in student learning and achievement?
- What connections (e.g., scenarios, simulations, peer teaching, assignments) are made in courses between course knowledge and its application to teaching practice so that candidates can learn how to apply their coursework knowledge?

Quality of content knowledge and teaching methods has been phased in as a review area, so not all programs that have had site visits have received a rating in this area. Fifteen have been reviewed to date. The average program rating was 2.53 , with reviewed programs nearly evenly divided between a rating of "good" and a rating of "needs improvement."

FIGURE 53
Distribution of Quality of Content Knowledge and Teaching Methods Scores

## Quality of Clinical Placement, Feedback, and Candidate Performance

Quality of clinical placement, feedback, and candidate performance looks at the clinical experience - the opportunity teacher candidates have to practice teaching in real classrooms in the field - through two distinct lenses. The first lens considers the program side of the coin: ensuring that the program's placements, cooperating teachers, supervisors, feedback instruments, etc. are aligned to identify candidates' strengths and weaknesses and foster professional growth to ensure candidates are ready to be teachers of record in their own classrooms. The second lens looks at the teaching skill of candidates as a measure of the effectiveness of the program. By observing candidates in their final, summative student teaching experience, the site visit can gauge the overall quality of the training and preparation they have received from the program. The framework for quality of clinical placement, feedback, and candidate performance specifically addresses the following questions:

- How does the program structure the final clinical experience and select the clinical placement site?
- How are cooperating teachers and/or program supervisors chosen, trained, and supported by the program?
- What aspects of teaching and learning does the observation tool provide feedback on?
- What is the quality of the feedback candidates receive? Is it an accurate reflection of the quality of teaching and learning during the observed lesson?
- How consistent is the feedback provided by the program supervisors and classroom cooperating teachers?
- Is the feedback constructive, actionable, and likely to lead to improvement in teaching and learning practices?
- How do cooperating teachers, principals, and/or program supervisors view the overall quality of teacher candidates?
- What is the impact of candidate teaching on student learning during the observed lesson?
- What is the evidence from the site visit with regards to the quality of teacher candidates?

All 23 programs that have had site reviews have been rated in this area. The average score for quality of clinical placement, feedback, and candidate performance is 2.3. University of Tampa is the only program to receive the highest rating of "strong" in this area. The majority of programs were rated as needing improvement ("weak" per Florida's framework) in this area.

FIGURE 54

## Distribution of Quality of Clinical Placement, Feedback, and Candidate Performance Scores

## Quality of Program Performance Management

Quality of program performance management looks at whether and to what extent the program has functions and structures in place to collect and analyze data for continuous improvement of the effectiveness of teacher preparation and candidate outcomes. Programs with a culture of continuous improvement will routinely use a variety of data to assess what is working well and what can be improved within the program. The framework for quality of program performance management specifically addresses the following questions:

- How do program leadership and faculty use a wide variety of information to understand candidate and cohort performance and make improvements to the program? How often?
- What is the quality of data collected and used by the program and who uses it? How does the program monitor the quality of its data and seek to improve data quality where needed?
- Does the program have—and use—quality control "gates," transition points, or checkpoints at the end of each program stage to decide whether a candidate is ready to move to the next stage? What data are used to make these decisions?
- Does the program have intervention plans for weaker candidates? For those candidates unable to meet performance improvement goals, is there a non-certification degree track for them?
- How does the program monitor and take steps to improve the quality of coursework and teaching?
- How does program leadership take action as a result of information? Frequency? What steps are taken to monitor the results of steps taken to make improvements?
- How does the program ensure it meets Florida Statutes [1004.04(2)(d), 1004.85 (3)(b)3, 1012.56(8)] whereby prior to program completion, each candidate must demonstrate positive impact on student learning growth and pass all relevant portions of the Florida Teacher Certification Examination (FTCE)?

All 23 programs that have had site visits received a rating in this area. The average score was 2.3, with the University of Tampa once again the stand out as the only program to receive a "strong" rating. The majority of programs were rated as in need of improvement in this area.

## FIGURE 55

## Distribution of Quality of Program Performance Methods Scores

## EXCEED Site Reviews

As noted above, the four institutions that received grants as part of the EXCEED initiative to improve and advance their teacher preparation programs had multiple site visits for continuous improvement and evaluation purposes. The institutions were visited annually in 2015, 2016, and 2017.

The EXCEED site reviews offer a lens to view whether the site reviews do, as intended, offer actionable feedback that results in progress in meeting the indicators outlined in the framework.

FIGURE 56
EXCEED Programs Site Visit Ratings 2015-2017

| Florida Atlantic University | 2015 | 2016 | 2017 |
| :--- | :--- | :--- | :--- |
| Selection | 3 | 3 | 3 |
| Content Knowledge | 2 | 2 | 3 |
| Clinical Placement | 2 | 3 | 3 |
| Performance Management | 2 | 3 | 3 |
|  |  |  |  |
| Stetson University | 2015 | 2016 | 2017 |
| Selection | 3 | 3 | 3 |
| Content Knowledge | 2 | 2 | 2 |
| Clinical Placement | 2 | 2 | 2 |
| Performance Management | 2015 | 2 | 3 |
|  | 2 | 2016 | 2017 |
| St. Petersburg College | 2 | 2 | 2 |
| Selection | 2 | 3 | 3 |
| Content Knowledge | 2 | 3 | 3 |
| Clinical Placement |  |  | 3 |
| Performance Management | 2015 | 2016 | 2017 |
|  | 3 | 3 | 3 |
| University of Florida | 2 | 2 | 3 |
| Selection | 2 | 2 | 3 |
| Content Knowledge | 2 | 3 | 3 |
| Clinical Placement |  |  |  |
| Performance Management |  | 2 | 3 |

All four of the institutions have made progress against the review framework. Florida Atlantic University and the University of Florida each made advancements in three of the four areas, and each program is now rated as "good" in all four areas. It will be interesting to see if these programs are able and motivated to continue to progress and achieve ratings of "strong" in the future. St. Petersburg College also made progress in three of the four areas, with selection still rated as in need of improvement. Stetson University made progress in one area, and now has two areas rated as "good" and two rated as "needs improvement."

Notably, selection is the only one of the four areas that remains unchanged for all programs over time. It may be that this is the hardest area for programs to change since it likely impacts not just program admission but which candidates are accepted to the institution of higher education as a whole. Further, Florida law requires a minimum GPA of 2.5 , while the framework requires a 3.0 for a rating of "good" or "strong."

## Observations/Considerations

With the site reviews in such a preliminary stage, it would not be appropriate to draw conclusions about the site review process or protocols or the quality of programs or teacher candidates. The following observations and considerations are therefore offered not as judgments, but rather as recommendations of things to watch for and food for thought.

1. Ratings overall - Nearly all ratings received by programs were either 2 "needs improvement" or 3 "good". While it is welcome news that no programs received area ratings of 1 "inadequate", there were also very few ratings of 4 "strong" awarded. As more reviews are conducted, the state will want to ensure that the ratings are calibrated to the framework. The state will also want to look at whether programs that receive a rating of "good" are sufficiently motivated to continue to advance and improve.
2. University of Tampa - Although this report purposefully avoids identifying the ratings of particular programs, an exception is being made for the University of Tampa, which stands out as the only program to receive any "strong" ratings. The University of Tampa received the highest ratings in both clinical placement and performance management, and did not receive any rating below "good."

## 3. Clinical placement

- Observations and feedback - Within the quality of clinical placement area, the quality of observations and feedback was the most common area in need of improvement. Many programs lack common protocols and instrumentation for ensuring that candidates are observed frequently and receive actionable, appropriate feedback that will help their growth and development. Too many programs leave protocols and instrumentation to the discretion of individual supervisors/observers, without commensurate quality controls to ensure consistency and quality.
- Quality versus quantity - Programs tended to emphasize the amount of clinical/field work over ensuring that field work would include high quality placements with clear mechanisms for ensuring high quality observations and feedback.
- Differentiating between clinical placement quality and candidate/program quality - This area evaluates two related but quite distinct topics. The first looks at the quality of the clinical experience. The second looks at the quality of the training and preparation of the program as a whole, as measured by the knowledge and skills demonstrated by teacher candidates during the summative field placements. The latter is critically important, and perhaps worthy of its own area rating, as it reflects on and is influenced by much more than just the clinical placement area. Further, it is problematic if the overall area score allows one topic to compensate for weakness in the other, particularly if the weakness is in candidate performance.

4. Selection - The experience of the EXCEED programs suggests this may be the hardest area in which to make progress. Whether because of fundamental changes required of admissions to the university as a whole, recruiting/catchment area, or program size, programs may need technical assistance and/or additional incentives to progress.
5. Content Knowledge and Teaching Methods

- Variation across subject/instructional areas - The sub-indicators for the content knowledge and teaching methods area show that most programs vary considerably in quality across subject and method areas (e.g., literacy, mathematics, social studies, science, classroom management, assessment). Programs tend to be a mix of stronger and weaker areas, perhaps suggesting that this is a result of the strengths, weaknesses, and discretion of individual faculty members and that programs may lack overall coherence. Further, the overall rating for this area may mask significant weaknesses (or strengths) in specific subject or instructional topics.
- Scientifically-based reading - Given Florida's long focus on the science of reading instruction and evidence-based practice, it is encouraging to note that most programs were rated as good or strong in their preparation in this area. Of the fourteen programs that received ratings on this sub-indicator, only two were found to be in need of improvement.

6. Performance management - Perhaps the most common weakness across reviewed programs is the lack of performance management systems to monitor candidate and program performance. Such systems are essential to continuous program and candidate improvement. Most programs rely on informal tracking and monitoring mechanisms, rather than establishing formal systems that ensure consistent collection, analysis and application of data.

## Appendix A: Performance Metric Table

| Performance Metrics | Level 4 <br> Performance <br> Target (4 points) | Level 3 <br> Performance <br> Target (3 points) | Level 2 <br> Performance <br> Target (2 points) | Level 1 <br> Performance <br> Target (1 point) |
| :---: | :---: | :---: | :---: | :---: |
| Placement Rate (not applicable for PDCP programs per Section 1012.56(8), F.S.) | Placement rate is at or above the 68th percentile of all equivalent programs across the state. | Placement rate is at or above the 34th percentile and below the 68th percentile of all equivalent programs across the state. | Placement rate is at or above the 5th percentile and below the 34th percentile of all equivalent programs across the state. | Placement rate is below the 5th percentile of all equivalent programs across the state. |
| Retention Rate | The average number of years employed in the 5 -year period following initial placement is 4.5 years or more. | The average number of years employed in the 5 -year period following initial placement is 3 years to less than 4.5 years. | The average number of years employed in the 5-year period following initial placement is 2 years to less than 3 years. | The average number of years employed in the 5year period following initial placement is less than 2 years. |
| Performance of prekindergarten-12 students on statewide assessments using results of student learning growth formula per Section 1012.34, F.S. | The probability that the average student learning growth among students taught by program completers exceeds the expectations for those students is $\geq 95$ percent. | The probability that the average student learning growth among students taught by program completers exceeds the expectations for those students is < 5 percent; AND the probability that the average student learning growth among students taught by program completers falls short of the expectations for those students' expectations is $<5$ percent. | Not calculated. | The probability that the average student learning growth among students taught by program completers falls short of the expectations for those students is $\geq 95$ percent. |
| Student performance by subgroups data | At least 75 percent of the subgroups meet or exceed the state standard for performance. | At least 50 percent, but less than 75 percent of the subgroups meet or exceed the state standard for performance. | At least 25 percent but less than 50 percent of the subgroups meet or exceed the state standard for performance. | Fewer than 25 percent of the subgroups exceed the state standard for performance. |
| Results of program completers' annual evaluations as specified in Section 1012.34, F.S. | At least 30 percent of the program's completers received a highly effective rating and 90 to 100 percent of the program's completers received either highly effective or effective ratings, and no completers were rated unsatisfactory. | Program did not meet criteria for Level 4, but at least 80 percent of the program's completers received either highly effective or effective ratings, and no completers were rated unsatisfactory. | Program did not meet criteria for Level 3, but at least 60 percent of the program's completers received a highly effective or effective rating and no more than 5 percent (more than one (1) for $n$ $<20$ ) of the program's completers were rated unsatisfactory. | Program did not meet criteria for Level 2,3 or 4. |

| Performance Metrics | Level 4 | Level 3 | Level 2 | Level 1 |
| :--- | :--- | :--- | :--- | :--- |
|  | Performance | Performance | Performance | Performance |
|  | Target (4 points) | Target (3 points) | Target (2 points) | Target (1 point) |

Production of program
The critical teacher shortage
completers in statewide program increased the number of
critical teacher program completers compared to
shortage areas, per Rule 6A-20.0131,
the year before with a minimum of 2 completers in each year.
F.A.C., in accordance
with Section 1012.07,
F.S.

BONUS ONLY,
pursuant to
subparagraph (3)(a)6.
of this rule.

## Appendix B: Program Aggregations

Florida's teacher preparation accountability system is designed to evaluate program level, rather than institutional level performance. Although the state aims for program-level accountability, it does combine together data from certain programs to increase the amount of available data. For example, in certain cases graduate and undergraduate programs are combined, discrete science programs such as biology, chemistry or physics are combined, and discrete world language programs (e.g., French or Spanish) are combined.

The following programs are identified by the FDOE with the same program code for the purposes of producing the Annual Program Performance Report (APPR) and thus were considered as a single program in the analyses in this report.

| Institution | Program Code | Programs |
| :---: | :---: | :---: |
| Broward College | 288.5 | Biology |
|  |  | Middle Grades General Science |
| Chipola College | 288.5 | Biology |

| GRAND TOTAL | 70 | 80.0\% | 209.6 |

[^0]:    ${ }^{1}$ While the report provides comparative rankings, the data set is not robust enough to test for statistically significant differences among programs. There is a large amount of variability in the data set, including the size of programs and the number of subscores available for each program.
    ${ }^{2}$ Details about the specific timeframe associated with data for each performance metric are provided in Figure 4 in the next section.

[^1]:    ${ }^{3}$ The authorizing statute for professional development certification programs (Section 1012.56(8), FS) was amended to reflect that districts may provide such programs, rather than they must do so. As a result some districts have approved programs that are inactive. At present, there are five PDCPs without active enrollments.

[^2]:    ${ }^{4}$ To increase the amount of available performance data that can be considered, some similar programs within an institution are combined for accountability purposes. These aggregations result in the analysis of 296 programs in this report. This is discussed further in the next section and Appendix B.
    ${ }^{5}$ These numbers are considerably lower than the number of programs included in last year's report, which identified 433 programs in the state. The reduction is due to an ongoing effort by FDOE to remove inactive or defunct programs from its rolls.

[^3]:    ${ }^{6}$ National Council on Teacher Quality, 2017 State Teacher Policy Yearbook
    https://www.nctq.org/dmsView/NCTQ_2017_State_Teacher_Policy_Yearbook
    ${ }^{7}$ For the placement and retention rate metrics, placement and retention in private schools and out-of-state schools are also considered when data are provided by the institution and verified.

[^4]:    ${ }^{8}$ Rule 6A-5.066 was amended as of April 30, 2018 to include the formula for Continuing Approval. In order to calculate the continued approval summative score, the weights for each component of the continued approval summative score are $50 \%$ for the APPR Average Summative Rating, 20\% for the Continued Approval Site Visit Rating, and 30\% for Evidence of Programmatic Improvement Rating.

[^5]:    ${ }^{9}$ The number of completers represents the total number for the six-year cohort that spans 2010-2011 to 2015-2016. This six-year cohort corresponds to the reporting years for the 2018 APPRs.

[^6]:    ${ }^{10}$ Programs receiving a 1.0 in 2017 lacked sufficient data to receive an APPR rating. This could reflect low-enroll ment or other ways in which the program did not meet the business rules for APPR performance metric scoring.

[^7]:    ${ }^{11}$ Program completers employed in a private or out-of-state school their first or second year following program completion are also included if data are reported by the program and have been verified.

[^8]:    ${ }^{12}$ Program completers employed in a private or out-of-state school their first or second year following program completion are also included if data are reported by the program and have been verified.
    ${ }^{13}$ See "Public School Teacher Attrition and Mobility in the First Five Years" from the U.S. Department of Education's National Center for Education Statistics. Data are national and not broken out by state. http://nces.ed.gov/pubs2015/2015337.pdf.
    ${ }^{14}$ Ingersoll, R., Merrill, L., \& May, H. (2014). What Are the Effects of Teacher Education and Preparation on Beginning Teacher Attrition? CPRE Research Report \#RR-82. Philadelphia: Consortium for Policy Research in Education. DOI:10.12698/cpre.2014.rr82

[^9]:    ${ }^{15}$ In its reporting to FDOE, Chipola College has reported teacher candidates as participating in an Educator Preparation Institute program. However, Chipola College does not offer an EPI.

[^10]:    ${ }^{16}$ See for example "On the Path to Equity: Improving the Effectiveness of Beginning Teachers" from the Alliance for Excellence Education. http://all4ed.org/reports-factsheets/path-to-equity/. In addition, this op-ed from the Orlando Sentinel is an example of the perception that Florida follows the national trend: http://www.orlandosentinel.com/opinion/os-teachers-leave-florida-scott-maxwell-20160521-column.html

[^11]:    ${ }^{17}$ More information of Florida's VAM model can be found at: http://www.FDOE.org/teaching/performance-evaluation/

[^12]:    ${ }^{18}$ Rule 6A-5.066, Florida Administrative Code, defines "In-field teacher" as an instructional employee assigned duties in a classroom teaching subject matter or providing direct support in the learning process of students in the area in which the instructional personnel is trained and certified.

[^13]:    ${ }^{19}$ Florida Statute 1012.34 articulates the state's teacher evaluation requirements.

[^14]:    ${ }^{20}$ 2016-2017 Educator Performance Evaluation Ratings accessed at: http://www.FDOE.org/teaching/performance-evaluation/

[^15]:    ${ }^{21}$ If a program receives the critical teacher shortage bonus, the average of all other performance metric scores available for that program is multiplied by 0.8 and added to the bonus score of four points multiplied by 0.2 to yield the summative rating score.
    ${ }^{22}$ 2015-2016 is the school year that corresponds to the data in this report. Information on how critical shortage areas are determined can be found at: http://www.FDOE.org/core/fileparse.php/7766/urlt/Critical-Teacher-Shortage-Areas-2015-16

[^16]:    ${ }^{23}$ For example, if a program received the following scores in each of the components: APPR Average Summative Rating of 3.2; Continued Approval Site Visit Rating of 3.0; and Evidence of Programmatic Improvement Rating of 4.0, the continued approval summative score would be $(.50 * 3.2)+(.20 * 3.0)+(.30 * 4)=3.4$.
    ${ }^{24}$ TPI-US is a national organization that specializes in site reviews of teacher preparation programs. Modeled after the inspectorate model used in the United Kingdom, TPI-US relies on expert reviewers who are experienced practitioners, as opposed to the peer review model commonly used by state and national accreditors. More information on TPI-US can be found at: https://www.tpius.org/.
    ${ }^{25}$ Two different programs (Elementary Education and Educator Preparation Institute) were reviewed at one of the pilot institutions. Since there were differences in scores between the two programs, they were considered separately, and the analysis that follows refers to 23 programs.

[^17]:    ${ }^{26}$ The full Florida site review framework can be found at: https://www.flrules.org/gateway/reference.asp?No=Ref-09268
