Purpose

The purpose of this document is to assist in accurately reporting class size data by:

1) Providing a brief history of class size maximums.
2) Describing changes made during the previous legislative session.
3) Providing an overview of the Survey 2 class size processes.
4) Describing steps taken in the process of determining class size compliance.
5) Providing answers to frequently asked questions.

Background

In November 2002, Florida’s voters approved a state constitutional amendment (Article IX, Section 1) setting limits for the maximum number of students in a classroom by the start of the 2010-11 school year. These limits (class size maximums) apply to individual classes, so that, by Fall 2010, no classroom in which a core course is taught may contain more students than allowed by the constitutional limits. The class-size maximums established in section 1003.03, Florida Statutes, are described below:

<table>

2019-20 Class Size Legislative Changes

There were no legislative changes to class size for 2019-20.
Survey 2 Class Size Process Overview

Class Size Trial Run Processing:
Survey 2 Class Size Trial Runs typically take place in September. All districts may participate in trial runs, and should take advantage of this opportunity to reduce data reporting errors or appropriately staff rooms before survey processing begins in October.

Survey 2 Processing Period Begins:
During the Survey 2 processing period, class size reports (see Pg. 10) are generated over the weekend. District MIS staff are notified via email when the reports are available for download. It is critical for districts to have all data reporting errors resolved before the final amendment date of December 15.

Memo from Commissioner Notifying Districts of Class Size Compliance:
The memo details the process and timeline for appeals, and is typically released in early January. A follow-up memo also includes the pre-appeals initial reduction calculation, completed by the Office of Funding and Financial Reporting.

Survey 2 Final Data:
Data as of the last day of the survey period, December 15, are used to determine compliance with class-size maximums and to conduct initial penalty calculations. Class size reports from this point in time are made available for districts to download.

Class Size Appeals Process Begins:
The appeals process follows the timeline and details outlined in the Commissioner’s class size memo.

Class Size Appeals Process Ends:
The appeals process follows the timeline and details outlined in the Commissioner’s class size memo.

February 15th
Statutory deadline for the Commissioner’s submission of an alternate reduction calculation to the Legislative Budget Commission.

Office of Funding and Financial Reporting performs post appeals alternate reduction calculation.
Reporting and Determining Class Size

Database Formats and Elements Used to Determine Class Size

Data used in the Class Size Algorithm are derived from the Student Course Schedule Format and the Teacher Course Format, as submitted to the Department of Education Staff and Student Information Databases during October (Survey 2) and February (Survey 3) survey periods. The data elements extracted from these formats include the following:

**Student Course Schedule Format**

- District Number, Current Enrollment
- School Number, Current Enrollment
- District Number, Current Instruction/Service
- School Number, Current Instruction/Service
- Student Number Identifier, Florida
- Course Number
- Section Number
- Period Number
- Grade Level
- Term
- Day of Week Scheduled, Monday
- Day of Week Scheduled, Tuesday
- Day of Week Scheduled, Wednesday
- Day of Week Scheduled, Thursday
- Day of Week Scheduled, Friday
- Day of Week Scheduled, Saturday
- Day of Week Scheduled, Alternate Date Certain
- Class Minutes, Weekly

**Teacher Course Format**

- District Number, Current Enrollment
- School Number, Current Enrollment
- District Number, Current Instruction/Service
- School Number, Current Instruction/Service
- Social Security Number (Teacher)
- Term
- Term/Survey Indicator
- Course Number
- Section Number
- Period Number
- Facility Type
- Classroom Identification (FISH) Number
- Scheduling Method
- Certification/Licensure/Qualification Status
- Team Teacher Training
- Blended Learning Course

The Classroom is the Key

The Class Size Algorithm is neither a student/teacher ratio, nor a count of students in each of the wide range of courses taught in a district. The key to the Class Size Algorithm is the classroom. Thus, it is the term/classroom/period combination that is used to determine the number of students in each classroom at any given time during the school day. A classroom may contain more than one teacher, and multiple classes are frequently taught in a term/classroom/period combination.

Most classrooms in a district are identified using the FISH (Florida Inventory of School Houses) number, a 21-digit combination of Facility, Facility Suffix, Parcel, Building, and Room identifiers. However, students are also taught in facilities that are not owned and/or operated by a district, so Classroom Identification Numbers built on the same pattern as a FISH number must be assigned to these facilities in order to render unique classrooms to be counted and considered for the Class Size Algorithm.

It is recommended that districts carefully review FISH data for accuracy. The on line educational plant survey may be updated by district directors of facilities. Either Brian Gouin, (850) 245-9296, or Violet Brown, (850) 245-9232, in the Office of Educational Facilities are available to provide technical assistance to districts in completing the automated educational plant survey update.

How the Class Size Algorithm Works for Traditional Public Schools

The Class Size Algorithm counts all students in each term/FISH/period combination in which the main course (that is, the course in which there are the most students) is a core course. Following is a basic outline of the steps taken to determine the class size of rooms in a traditional public school:

1) Count the number of students in each course within each classroom (term/FISH/period combination). For students reported multiple times in a single classroom, count each student only once. Students are occasionally assigned to more than one course for a class, e.g., ESE students enrolled in both an ESE course and a mainstream course for a given class period.
2) Determine the main course taught in each classroom based on the course with the majority of students.
3) Determine the main grade taught in each class based on the grade with the majority of students in the main course.
4) Identify all classrooms in which the main course is a “core” course. Use only these classrooms in the remaining steps.
• Examples of core courses include mathematics, language arts/reading, science, social studies, English for Speakers of Other Languages, Exceptional Student Education, and courses taught in traditional self-contained elementary school classrooms. Please review the Course Code Directory for a complete list of core courses denoted with an asterisk.

5) Count the number of unduplicated students in each classroom, allowing for adjustments based on Scheduling Method.

How the Class Size Algorithm Works for the School-Level Grade Group Averages

The Class Size Algorithm counts all the students in every term/FISH/period combination in which the main course (that is, the course in which there are the most students) is a core course and divides that number by the total term/FISH/period “core” combinations reported to determine the average. Following is a basic outline of the steps taken to determine the numerators (students in classrooms) and denominators (term/FISH/period combinations) that render the class averages for PK-3, 4-8, and 9-12 grade classrooms:

1) Count the number of students in each course within each classroom (term/FISH/period combination). For students reported multiple times in a single classroom, count each student only once. Students are occasionally assigned to more than one course for a class, e.g., ESE students enrolled in both an ESE course and a mainstream course for a given class period.

2) Determine the main course taught in each classroom based on the course with the majority of students.

3) Determine the main grade taught in each class based on the grade with the majority of students in the main course.

4) Identify all classrooms in which the main course is a “core” course. Use only these classrooms in the remaining steps.

• Examples of core courses include mathematics, language arts/reading, science, social studies, English for Speakers of Other Languages, Exceptional Student Education, and courses taught in traditional self-contained elementary school classrooms. Please review the Course Code Directory for a complete list of core courses denoted with an asterisk.

5) Count the number of unduplicated students in each classroom, allowing for adjustments based on Scheduling Method.

6) For each grade group (PK-3, 4-8, and 9-12), sum the number of students in the “core” combinations.

7) For each grade group (PK-3, 4-8, and 9-12), count the number of “core” combinations.

8) Calculate the class averages. For each grade group of a school (PK-3, 4-8, and 9-12), divide the student count (from step 6) by the classroom count (from step 7).
Class Size Exclusions

The following exclusions are made in the process of building the class size average tables:

- Facility Types 02 (hospital), 05 through 08 (correctional facilities), and 10 (home).
- Course Number begins with an alpha character and Facility Type is 09 (Facility operated or owned by an agency or other provider other than the school district in which instructional services or classes are conducted).
- School Number, Current Instruction begins with an alpha character (indicating postsecondary schools, colleges, or universities).
- McKay Scholarship Reporting School Number (3518)
- Virtual Schools (school numbers 7001, 7004, 7006, and 7023)
- Virtual Labs (Location of Student Code equal to “T”)
- District Number equal to 68 (Florida School for the Deaf and the Blind) and 71 (Florida Virtual School).
- School numbers N998 (home education), N999 (private school), and 9994 through 9997.
- Duplicate students in the same term/FISH/period combination and their associated teachers. The duplicate students are added to the class size table, but are excluded from calculations. However, all teachers are considered.
- Period number ending in 88 (NN88 where NN is numeric) indicating “non-standard meeting times courses.”
- Days of the Week Scheduled not equal to Friday or Date Certain.
- School Function Setting equal to “D” (Department of Juvenile Justice (DJJ)) and “V” (Virtual).
- Term/Survey Indicator equal to “N” (term is not occurring during state reporting period being submitted).
- Blended Learning Course code equal to “Y” (indicates the course is a blended learning course).

A number of decision points are encountered in the process of counting the number of students in each term/FISH/period combination including the following:

- In the event that the core and non-core courses, in the same term/FISH/period combination, have the same number of students, the core course is determined to be the main course.
- In the event that the main course has two or more grades with the same number of students, the highest grade, not grade group, is determined to be the main grade.
- Adjustments are made based on the reported Scheduling Method. See Scheduling Methods and Factors table located in this document.
- When students are scheduled in the same room/period in multiple terms and the Term/Survey Indicator is equal to “Y,” terms are combined. See Combined Terms table located in this document.
## Scheduling Methods and Factors

<table>
<thead>
<tr>
<th>CODE</th>
<th>TITLE</th>
<th>DEFINITION</th>
<th>FACTOR</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Alternate Week Schedule</td>
<td>Teacher meets with different groups of students in same course/classroom on same day, but alternate weeks.</td>
<td>All students are aggregated, unduplicated and divided by two (2).</td>
</tr>
<tr>
<td>B</td>
<td>Block Scheduling</td>
<td>Course is scheduled so that students may earn one credit in the course in a semester.</td>
<td>All students are aggregated, unduplicated and divided by one (1).</td>
</tr>
<tr>
<td>C</td>
<td>Co-teaching</td>
<td>A classroom in which two or more teachers share responsibility for planning, delivering and evaluating instruction for all students in a class. In order to be considered co-teaching, this delivery system is provided whenever a class/subject is taught by two or more teachers and must continue for the entire class period.</td>
<td>All students are aggregated, unduplicated, and divided by the number of teachers in the same term/FISH/period coded “C.”</td>
</tr>
<tr>
<td>G</td>
<td>Individual or Small Group Instruction (Separate Setting)</td>
<td>Teacher meets with an individual student or small group of students in a separate classroom setting.</td>
<td>All students are aggregated, unduplicated and divided by one (1).</td>
</tr>
<tr>
<td>I</td>
<td>In-Class One-on-One (with Self-Contained)</td>
<td>Teacher meets with an individual student or small group of students on an individualized basis within a traditional classroom but not as a co-teacher.</td>
<td>All students assigned to the teacher coded “I” are divided by all teachers in the class.</td>
</tr>
<tr>
<td>M</td>
<td>Multiple-Use Classroom or Pod</td>
<td>More than one class meets during the same period in a space designated by one FISH number but separated by temporary “walls.”</td>
<td>All students are aggregated and divided by the number of teachers coded “M.”</td>
</tr>
<tr>
<td>S</td>
<td>Self-contained</td>
<td>One teacher provides total instruction for the entire class period.</td>
<td>All students are aggregated, unduplicated and divided by one (1).</td>
</tr>
<tr>
<td>W</td>
<td>Wheel Class</td>
<td>Same course meets in the same room with the same teacher during the same period on multiple days of the week, but with different groups of students.</td>
<td>All students are aggregated, unduplicated and divided by one (1).</td>
</tr>
</tbody>
</table>
## Combined Terms

When students are scheduled in the same room/period in multiple terms and Term/Survey Indicator = Y, terms are combined.

Available Reports

Improving the Accuracy of Class Size Calculations

It is essential that the district assure that every classroom is assigned a unique Classroom Identification Number, either a FISH number or a district-created Classroom Identification Number patterned on a FISH number. To assist districts with ensuring FISH numbers have been accurately reported, the following reports may be requested through the CICS option at Northwest Regional Data Center/Student Component Menu/Reports for Request.

- DPSxx.GQ.F70630.Yyyyy – FISH Reported with Scheduling Method “C” or “M”

Reports Created Subsequent to Class Size Calculation

The Florida Department of Education creates a number of reports subsequent to running the Class Average Algorithm that will allow a district to view its district averages and the detail for each grade grouping (PK-3, 4-8, and 9-12). The files also allow districts to identify which term/FISH/period combinations were included in the average, which scheduling methods were reported and the number of unduplicated students included in the count.

The files are created by the department after each class size calculation. Districts are notified via AskEIAS@fldoe.org when the files are available for download. It is essential for districts to download and review the files, not only to ensure that their classrooms are reported accurately, but also to be certain that all schools/classrooms that should be reported and included in the calculation, have been reported and included in the calculation.

  Note: These files are used to determine compliance for Charter, Choice, Schools of Excellence, and the Principal Autonomy Program.
- DPSxx.GQ.F70412.Yyyyy.Yyyy – Class Size Data Used to Determine PK-3 Grade Group Averages (DPSxx.GQ.F70424.Yyyyy in File Format)
- DPSxx.GQ.F70413.Yyyyy.Yyyy - Class Size Data Used to Determine 4-8 Grade Group Averages (DPSxx.GQ.F70425.Yyyyy in File Format)
- DPSxx.GQ.F70414.Yyyyy.Yyyy - Class Size Data Used to Determine 9-12 Grade Group Averages (DPSxx.GQ.F70426.Yyyyy in File Format)
- DPSxx.GQ.F70467.Yyyyy.Yyyy – Grade PK-3 Classrooms with Students Over the Class Size Maximum, Including Charter and DJJ (DPSxx.GQ.F70470.Yyyyy in File Format)
• DPSxx.GQ.F70468.Yyyyys – Grade 4-8 Classrooms with Students Over the Class Size Maximum, Including Charter and DJJ (DPSxx.GQ.F70471.Yyyyys in File Format)

• DPSxx.GQ.F70469.Yyyyys – Grade 9-12 Classrooms with Students Over the Class Size Maximum, Including Charter and DJJ (DPSxx.GQ.F70472.Yyyyys in File Format)

• DPSxx.GQ.F70631.Yyyyys – Percentage of Classrooms/Periods with a Co-teacher by Grade Group (DPSxx.GQ.F70632.Yyyyys in File Format)

• DPSxx.GQ.F71167.Yyyyys – FTE Overage for Non-Compliant Traditional Classrooms/Periods (DPSxx.GQ.F71168.Yyyyys in File Format)

Note: This report only lists traditional classrooms/periods that have FTE overage. If report states “no data found,” that means you do not have any traditional rooms out of compliance.

**Class Size Data Quality Application**

The [Class Size Data Quality Application](#) provides access to class size data for charter schools and district-level staff. Data in the application are updated after each class size run and may assist districts with ensuring data have been accurately reported. All data in the application are “view only” and may not be amended in the application. Access to the application is provided by each district’s Single Sign-On (SSO) Administrator. If you require assistance with determining your district’s SSO Administrator, please contact [K12Verify@fldoe.org](mailto:K12Verify@fldoe.org).
Frequently Asked Questions

1. How do I make sure that multiple classes taught in a “pod” that is only assigned a single FISH number are adjusted appropriately?

To be certain that multiple classes taught in one large classroom separated by temporary “walls” are adjusted appropriately, each teacher who is the primary teacher for each group of students should be coded with Scheduling Method “M” – “Multiple-Use Classroom or Pod.” In this way, all of the students in the “pod” will be added together and then divided by the total number of teachers coded “M.”

2. How does the Scheduling Method code “C” (Co-Teacher) affect the class size calculation?

If two or more teachers are assigned to a group of students and each teacher is responsible for ALL students during the ENTIRE period span indicated on the schedule, then all of the teachers should be coded “C,” and the total number of students (unduplicated) will be divided by the number of teachers coded with a “C.”

3. What is the correct way to handle classes to which two different Scheduling Method codes are applicable? Both of our high schools use Block Scheduling so their Scheduling Method is code "B." They also have JROTC classes which are taught by co-teachers, which is code "C." What is the correct way to decide which code to use?

You should code all of the applicable JROTC teachers with Scheduling Method C so that the total number of students in the classroom is divided by the total number of Co-Teachers. Since code “C” has an arithmetic function in the Class Size Algorithm, and code “B” is informational, code “C” takes precedence.

4. Are the students assigned to the “I” (In-Class One-on-One) teacher factored in to reduce class size?

Yes. In-Class One-on-One students are factored in the class average in that they are divided by both the instructor assigned to those students and the other non-I instructors assigned to the class.

5. If two teachers are assigned to one classroom, should they both be coded as Co-Teachers?

Not necessarily. Only if BOTH teachers are responsible for ALL students, should they both be coded as Co-Teachers.

6. What if two teachers are assigned to one class, but one of them is only responsible for one student or a small group of students in the classroom?

The primary teacher should be coded “S” (Self-Contained). The other teacher or teachers should be assigned to the students for whom he or she is responsible and coded “I” (In-Class One-On-One).

7. Should a separate Course Number be assigned to courses taught by “In-Class One-On-One” teachers?
Course numbers are determined by the student performance standards associated with the course. If the “In-Class One-On-One” teacher is responsible for the same student performance standards as the general education teacher, then both teachers should be assigned the same course number. If the “In-Class One-On-One” teacher is teaching different skills, then the appropriate course number for those performance standards should be assigned.

8. In a Support Facilitation model classroom in which there is an “S” (Self-Contained teacher) and an Exceptional Student Education (ESE) teacher, should they both be coded “C” (Co-Teacher)?

No. In a Support Facilitation model classroom, an ESE teacher provides support for ESE students’ achievement. Support facilitators work with the general education teachers and students identified with exceptionalities as needed. In this model, the basic education teacher is coded “S” (Self-Contained) and the ESE teacher is coded “I” (In-Class One-On-One).

9. What is the purpose of data element “Term/Survey Indicator?”

The data element “Term/Survey Indicator” allows districts to indicate which classes actually meet during the state reporting period (FTE survey week) being submitted. In this way, for instance, if districts submit classes meeting during Terms 6 and 7 for funding, but only the Term 6 classes are in session during the survey week, these classes should be coded “Y” and the Term 7 classes should be coded “N.”

10. Why does the Class Size Algorithm only average core courses taught on Friday?

Due to the huge volume of data that is necessary to be processed to determine the averages, it was decided to take a snapshot of a representative day of the week. The statistical difference between averages derived from one day and those derived from every school day were not significant enough to justify the investment of time and resources necessary to process the larger sample size.

11. What is the purpose of data element “Day of the Week Scheduled, Alternate Date Certain?”

In a few schools in the state, no core courses are taught on Friday, the day used in the Class Size Algorithm. The data element “Day of the Week Scheduled, Alternate Date Certain” was created for districts with ENTIRE SCHOOLS that do not teach core courses on Friday. This data element should be coded “Y” only if an entire school would not be included in the class average calculation because NO core courses meet on Friday. In that case, the district should choose another representative day and code “Day of Week Scheduled, Alternate Date Certain” for all courses that meet on that day.
12. If my district or charter school is determined to be noncompliant with class size maximums, are we required to submit a Class Size Compliance Plan?

Yes. Section 1003.03(4)(e), F.S., requires each district and charter school out of compliance with class size requirements to submit to the commissioner, by February 1, a plan that describes the specific actions that will be taken to fully comply with class size reduction requirements by October of the following school year. A compliance plan for a traditional public school or district-operated school of choice must be certified by the school board. A charter school’s compliance plan must be certified by the charter school’s board of directors. The certified compliance plan should be emailed to K12Verify@fldoe.org.

Note: Charter schools’ calculation for compliance shall be the average at the school level. See section 1002.33(16)(b)3., F.S.

13. How can I gain access to the Class Size Data Quality Application?

Access to the Class Size Data Quality Application is granted by each district’s SSO Administrator. The application provides access to district users who are able to view class size data for all schools in the district, and charter school users who are only able to view their charter school’s data. If you require assistance with determining your district’s SSO Administrator, please contact K12Verify@fldoe.org.

14. My district or charter school is submitting a class size appeal due to data reporting errors. How can I gain access to the Class Size Appeals Application?

You may retrieve login credentials to the Class Size Appeals Application by emailing K12Verify@fldoe.org. Upon receipt of your email request, a member of our team will provide you with the login credentials via phone. The Class Size Appeals Application should only be used to correct data reporting errors. Supporting documentation for your appeal must be uploaded to the ShareFile folder.

15. How can I gain access to the ShareFile folder to upload supporting documentation for my class size appeal?

You may gain access to the ShareFile folder by submitting a request for access to K12Verify@fldoe.org. The ShareFile folder is only used in the class size appeals process to upload supporting documentation for your appeal. All data reporting errors must be resolved in the Class Size Appeals Application by the appropriate deadline.

16. How can I update the Master School Identification (MSID) file to indicate my school is a School of Excellence or Principal Autonomy Program school?

The School of Excellence and Principal Autonomy Program fields are “view only” and can only be updated internally by the Florida Department of Education. If you believe these fields have been incorrectly designated, please email your concern(s) to K12Verify@fldoe.org.
17. How can I update the Master School Identification (MSID) file to indicate a school is a district-operated school of choice?

District-operated schools of choice are indicated by the district on the MSID Application submitted to the Office of PK-12 Education Information Services (EIS). To update this field, please contact EIS at AskEIAS@fldoe.org.

18. When will the Florida Department of Education determine compliance with class size maximums?

Compliance with class size maximums is determined using final Survey 2 data as of December 15 when the survey closes.

19. How can my charter school obtain class size reports?

Charter schools may obtain class size reports generated by the Florida Department of Education by requesting the reports from their district’s Management Information Systems (MIS) staff. Also, charter schools may view their class size data by obtaining access to the Class Size Data Quality Application from their district’s SSO Administrator. If you require assistance with determining the appropriate contact in your district, please contact K12Verify@fldoe.org.
