

APPENDIX R

Student Survey Checklists – 2006-07

Purpose and Use: The checklists in this appendix are for each of the PK-12 student surveys, and are intended for school district use in the preparation, processing, verification and update of each DOE Information Data Base PK-12 student survey. They have been designed to assist the district MIS and data processing staff in determining that no important step has been omitted in the process, all data have been submitted, errors have been corrected and the expected results for the survey have been achieved. Some districts may have created their own checklists. If this is the case, additional items may be found in this appendix that can be used to update existing checklists. Other districts are urged to use these checklists or to customize them to suit the needs of the district.

The following is an explanation of each of the major headings on the checklists:

Timeline: Appendix B of this manual lists the timelines for each PK-12 student, staff and WDIS survey. These timelines include the survey dates, due date, state processing window, and last day of the update window.

Record Formats: The record formats listed are the ones to be reported for the survey. It is essential that the district staff determine that the latest version of the format for the reporting year is being used. It is also essential that district staff study the record formats to determine which students and which data elements are to be reported for the survey. Useful information can be found in the cover pages of each record format.

Potentially Problematic Data Elements by Record Format: The district needs to pay close attention to the data elements listed in this section. These elements are not necessarily the most important for the survey. They are elements that have been problematic in the past as far as quality and accuracy of reporting is concerned. The district needs to be certain that these elements are accurate for each student/staff member reported in the survey. Remember, after the close of the state processing window for each survey, reports/files are generated to fill data requests and to create publications. Consequently, it is essential that reported data are accurate when the state processing window closes.

Datasets Loaded to Data Base: District MIS and data processing staff must check initial edit reports and/or the Edit Status Tables of the on-line programs to be certain that all initial datasets submitted by the district have loaded to the data base. Making this determination can save valuable time in the long run.

Validation/Exception Reports: These reports must be requested by the district after appropriate datasets have been loaded to the data base. They are not automatically produced by EDS. The requests should be made as early in the survey as possible to allow ample time for corrections to be made.

APPENDIX R

Student Survey Checklists – 2006-07

Reports Listing Records with Certain Errors That Will Cause FTE to be Nulled: In addition to the validation/exception reports, the reports listed in this section provide individual listings of Student Course Schedule records with FTE that will be nulled if certain errors are not corrected. These reports can be helpful in the correction process.

Reports Helpful for Reviewing Data Submitted: Once datasets have been submitted, these reports will give the district a view of certain kinds of information. They can be used to determine if the data submitted have produced the expected results. In some instances, these reports will point out data problems. If requested during the state processing window, data problems can potentially be determined and corrected prior to the close of the processing window. Since most of the reports are produced by school, they can be shared with school level staff for data verification. Additional reports are available, but those listed can be particularly helpful.
