

Paper Reduction Suggestions

1. Since there is a school improvement plan, why do we have to go through the accreditation process?
2. Students could take tests on the computer and eliminate a lot of paper.
3. Condense forms into simpler, fewer forms.
4. Store IEP information on CDs.
5. Use notes and notebooks for teacher planning instead of one to turn in 'for show.'
6. All attendance could be done through computer systems, not on computer systems and on paper.
7. IPDP could be submitted to PAEC on line and no written copy would be needed.
8. Computer AIPs would save a lot of paper.
9. Streamline the reporting and application process for federal programs.
10. Consolidate reporting, because small and rural districts often have only one person doing all of the reports.
11. All student information could be stored on the server in folders by school so when DOE reports are due the teachers would not have to resubmit the same data multiple times.
