Class Size Reporting Guidelines

Introduction

Purpose
The purpose of this document is to assist in accurately reporting class size data by:

1) Providing a brief history of class size maximums.
2) Describing any changes made during previous legislative sessions.
3) Providing an overview of the Survey 2 class size processes.
4) Describing steps taken in the process of determining class size compliance.
5) Providing answers to frequently asked questions.

Scope
In November 2002, Florida’s voters approved a state constitutional amendment (Article IX, Section 1) setting limits for the maximum number of students in a classroom by the start of the 2010-11 school year. These limits (class size maximums) apply to individual classes so that by Fall 2010, no classroom in which a core course is taught could contain more students than allowed by the constitutional limits. The class size maximums established in Section 1003.03, Florida Statutes (F.S.), are described below:

<table>
<thead>
<tr>
<th>Grade Group</th>
<th>Class Size Maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>PK-3</td>
<td>18</td>
</tr>
<tr>
<td>4-8</td>
<td>22</td>
</tr>
<tr>
<td>9-12</td>
<td>25</td>
</tr>
</tbody>
</table>

Class Size Legislative Changes
There were no legislative changes to class size in the 2022-2023 legislative sessions.

Section 1003.03, F.S.
Survey 2 Class Size Process Overview

Class Size Trial Run Processing
Survey 2 Class Size Trial Runs typically take place in September. All districts may participate in trial runs, and should take advantage of this opportunity to reduce data reporting errors or appropriately adjust class rooms before survey processing begins in October.

Memo from Commissioner of Education
Notifying Districts of Class Size Compliance
The memo details the process and timeline for appeals, and is typically released in early January. A follow-up memo also includes the pre-appeals initial reduction calculation, completed by the FDOE OFFR.

Class Size Appeals Process Begins
The appeals process follows the timeline and details outlined in the Commissioner of Education class size memo.

February 15
Statutory deadline for the Commissioner of Education submission of an alternate reduction calculation to the Legislative Budget Commission.

Class Size Trial Run Processing
Survey 2 Class Size Trial Runs typically take place in September. All districts may participate in trial runs, and should take advantage of this opportunity to reduce data reporting errors or appropriately adjust class rooms before survey processing begins in October.

Survey 2 Final Data
Data as of the last day of the Survey 2 period, December 15, are used to determine compliance with class size maximums and to conduct initial penalty calculations. Class size reports from this point in time are made available for districts to download.

Class Size Appeals Process Ends
The appeals process follows the timeline and details outlined in the Commissioner of Education class size memo.

OFFR
FDOE Office of Funding and Financial Reporting performs post appeals alternate reduction calculation.
Reporting and Determining Class Size

Database Formats and Elements Used to Determine Class Size

Data used in the class size algorithm are derived from the Student Course Schedule Format and the Teacher Course Format as submitted to the Florida Department of Education (FDOE) Staff and Student Information Databases during October (Survey 2) and February (Survey 3) survey periods. The data elements extracted from these formats include the following:

Student Course Schedule Format
- District Number, Current Enrollment
- School Number, Current Enrollment
- District Number, Current Instruction/Service
- School Number, Current Instruction/Service
- Florida Education Identifier
- Course Number
- Section Number
- Period Number
- Grade Level
- Term
- Day of Week Scheduled, Monday
- Day of Week Scheduled, Tuesday
- Day of Week Scheduled, Wednesday
- Day of Week Scheduled, Thursday
- Day of Week Scheduled, Friday
- Day of Week Scheduled, Saturday
- Day of Week Scheduled, Alternate Date Certain
- Class Minutes, Weekly

Teacher Course Format
- District Number, Current Enrollment
- School Number, Current Enrollment
- District Number, Current Instruction/Service
- School Number, Current Instruction/Service
- Social Security Number (Teacher)
- Term
- Term/Survey Indicator
- Course Number
- Section Number
- Period Number
- Facility Type
- Classroom Identification (FISH) Number
- Scheduling Method
The Classroom is the Key
The key to the class size algorithm is the classroom. The class size algorithm is neither a student/teacher ratio nor a count of students in each of the wide range of courses taught in a district. Instead, it is the term/classroom/period combination that is used to determine the number of students in each classroom at any given time during the school day. A classroom may contain more than one teacher and multiple classes are frequently taught in a term/classroom/period combination.

Most classrooms in a district are identified using a Florida Inventory of School Houses (FISH) number, a 21-digit combination of facility, facility suffix, parcel, building and room identifiers. Because students are also taught in facilities that are not owned and/or operated by a district, classroom identification numbers built on the same pattern as a FISH number must be assigned to these facilities in order to render unique classrooms for the class size algorithm to count and consider.

It is recommended that districts carefully review FISH data for accuracy. The online FISH database may be updated by district directors of facilities or by staff with Education Facilities Information Systems (EFIS) access. Contact either Violet Brown at Violet.Brown@fldoe.org, 850-245-9232, or Brian McIntyre at Brian.McIntyre@fldoe.org, 850-245-9760, in the FDOE Office of Educational Facilities for technical assistance in completing the FISH verification or update.

How the Class Size Algorithm Works for Traditional Public Schools
The class size algorithm counts all students in each term/FISH/period combination in which the main course (that is, the course in which there are the most students) is a core course. The process for determining classroom size in a traditional public school is as follows:

1) Count the number of students in each course within each classroom (term/FISH/period combination). For students reported multiple times in a single classroom, count each student only once. Students are occasionally assigned to more than one course for a class, e.g., Exceptional Student Education (ESE) students enrolled in both an ESE course and a mainstream course for a given class period.
2) Determine the main course taught in each classroom based on the course with the majority of students.
3) Determine the main grade taught in each class based on the grade with the majority of students in the main course.
4) Identify all classrooms in which the main course is a core course. Use only these classrooms in the final step.
   - Examples of core courses include mathematics, language arts/reading, science, social studies, English for Speakers of Other Languages (ESOL), ESE and courses taught in traditional self-contained elementary school classrooms. Please review the Course Code Directory for a complete list of core courses denoted with an asterisk.
5) Count the number of unduplicated students in each classroom, allowing for adjustments based on Scheduling Method.

How the Class Size Algorithm Works for the School-Level Grade Group Averages

The class size algorithm determines the average by counting all the students in every term/FISH/period combination in which the main course (that is, the course in which there are the most students) is a core course and then dividing that number by the total term/FISH/period core combinations reported. The process for determining the numerators (students in classrooms) and denominators (term/FISH/period combinations) that render the class averages for PK-3, 4-8 and 9-12 grade classrooms is as follows:

1) Count the number of students in each course within each classroom (term/FISH/period combination). For students reported multiple times in a single classroom, count each student only once. Students are occasionally assigned to more than one course for a class, e.g., ESE students enrolled in both an ESE course and a mainstream course for a given class period.

2) Determine the main course taught in each classroom based on the course with the majority of students.

3) Determine the main grade taught in each class based on the grade with the majority of students in the main course.

4) Identify all classrooms in which the main course is a core course. Use only these classrooms in the remaining steps.
   - Examples of core courses include mathematics, language arts/reading, science, social studies, ESOL, ESE and courses taught in traditional self-contained elementary school classrooms. Please review the Course Code Directory for a complete list of core courses denoted with an asterisk.

5) Count the number of unduplicated students in each classroom allowing for adjustments based on Scheduling Method.

6) For each grade group (PK-3, 4-8 and 9-12), sum the number of students in the core combinations (derived from step 5).

7) For each grade group (PK-3, 4-8 and 9-12), count the number of core combinations.

8) Calculate the class averages. For each grade group of a school (PK-3, 4-8 and 9-12), divide the student count (the numerator derived from step 6) by the classroom count (the denominator derived from step 7).

Class Size Exclusions

The following exclusions are made in the process of building the class size average tables:

- Facility Types are 02 (hospital), 05 through 08 (correctional facilities) and 10 (home).
- Course Number begins with an alpha character and Facility Type is 09 (facility operated or owned by an agency or other provider other than the school district in which instructional services or classes are conducted).
- School Number, Current Instruction begins with an alpha character (indicating postsecondary schools, colleges or universities).
- Virtual Schools (School Numbers 7001, 7004, 7006 and 7023).
- Virtual Labs (Location of Student Code equals to “T”).
- District Number equals to 68 (Florida School for the Deaf and Blind (D/B)) and 71 (Florida Virtual School (FLVS)).
- School Numbers N998 (home education), N999 (private school) and 9994 through 9997.
- Duplicate students in the same term/FISH/period combination and their associated teachers. The duplicate students are added to the class size table but are excluded from calculations. However, all teachers are considered.
- Period Number ending in 88 (NN88 where NN is numeric) indicating “non-standard meeting times courses.”
- Days of the Week Scheduled not equal to Friday or Date Certain.
- School Function Setting equals to “D” (Department of Juvenile Justice (DJJ)) and “V” (Virtual).
- Term/Survey Indicator equals to “N” (term is not occurring during state reporting period being submitted).
- Blended Learning Course code equals to “Y” (indicates the course is a blended learning course).

A number of decision points are encountered in the process of counting the number of students in each term/FISH/period combination including the following:

- In the event that the core and non-core courses are in the same term/FISH/period combination and have the same number of students, the core course is determined to be the main course.
- In the event that the main course has two or more grades with the same number of students, the highest grade, not grade group, is determined to be the main grade for class size purposes.
- Adjustments are made based on the reported Scheduling Method. See Scheduling Methods and Factors table located in this document.
- When students are scheduled in the same room/period in multiple terms and the Term/Survey Indicator equals to “Y,” the terms are combined. See Combined Terms table located in this document.

### Scheduling Methods and Factors

<table>

Available Reports

Improving the Accuracy of Class Size Calculations

It is essential that the districts assure that every classroom is assigned a unique classroom identification number, either a FISH number or a district-created classroom identification number patterned on a FISH number. To assist districts with ensuring FISH numbers have been accurately reported, the following reports may be requested through the Customer Information Control System (CICS) option at Northwest Regional Data Center/Student Component Menu/Reports for Request.

- DPSxx.GQ.F70393.Yyyyyys.FROZEN – Frozen Educational Facilities FISH File
- DPSxx.GQ.F70630.Yyyyyys – FISH Reported with Scheduling Method “C” or “M”

Reports Created Subsequent to Class Size Calculation

FDOE creates a number of reports subsequent to running the class average algorithm that will allow districts to view its district averages and the details for each grade grouping (PK-3, 4-8 and 9-12). The reports also allow districts to identify which term/FISH/period combinations were included in the average, which scheduling methods were reported and the number of unduplicated students included in the count.

The files are created by FDOE after each class size calculation. Districts are notified via ASKEIAS@fldoe.org when the files are available for download. It is essential for districts to download and review the files, not only to ensure that their classrooms are reported
accurately, but also to be certain that all schools/classrooms that should be reported and included in the calculation have been reported and included in the calculation.

  
  NOTE: These files are used to determine compliance for Charter, Choice and Schools of Excellence Program.

- DPSxx.GQ.F70412.Yyyyys – Class Size Data Used to Determine PK-3 Grade Group Averages (DPSxx.GQ.F70424.Yyyyys in File Format)

- DPSxx.GQ.F70413.Yyyyys – Class Size Data Used to Determine 4-8 Grade Group Averages (DPSxx.GQ.F70425.Yyyyys in File Format)

- DPSxx.GQ.F70414.Yyyyys – Class Size Data Used to Determine 9-12 Grade Group Averages (DPSxx.GQ.F70426.Yyyyys in File Format)

- DPSxx.GQ.F70415.Yyyyys – Summary of Class Size Data Used to Determine Class Averages (DPSxx.GQ.F70615.Yyyyys in File Format)

- DPSxx.GQ.F70466.Yyyyys – Numerators/Denominators by School/School Type/Grade Group (DPSxx.GQ.F70588.Yyyyys in File Format)

- DPSxx.GQ.F70467.Yyyyys – Grade PK-3 Classrooms with Students Over the Class Size Maximum, including Charter and DJJ (DPSxx.GQ.F70470.Yyyyys in File Format)

- DPSxx.GQ.F70468.Yyyyys – Grade 4-8 Classrooms with Students Over the Class Size Maximum, including Charter and DJJ (DPSxx.GQ.F70471.Yyyyys in File Format)

- DPSxx.GQ.F70469.Yyyyys – Grade 9-12 Classrooms with Students Over the Class Size Maximum, including Charter and DJJ (DPSxx.GQ.F70472.Yyyyys in File Format)

- DPSxx.GQ.F70631.Yyyyys – Percentage of Classrooms/Periods with a Co-Teacher by Grade Group (DPSxx.GQ.F70632.Yyyyys in File Format)

- DPSxx.GQ.F71167.Yyyyys – FTE Overage for Non-Compliant Traditional Classrooms/Periods (DPSxx.GQ.F71168.Yyyyys in File Format)

  NOTE: This report only lists traditional classrooms/periods that have a full-time equivalent (FTE) overage. If the report states “No Data Found,” then that means the district does not have any traditional rooms out of compliance.

Class Size Data Quality Application

The Class Size Data Quality Application provides access to class size data for charter schools and district-level staff. Data in the application are updated after each class size run and may assist districts with ensuring data have been accurately reported. All data in the application are “view only” and may not be amended in the application. Access to the application is provided by each district’s Single Sign-On (SSO) Administrator. If a district requires assistance with determining their district’s SSO Administrator, please contact K12Verify@fldoe.org.
Frequently Asked Questions

1. How do I make sure that multiple classes taught in a “pod” that is only assigned a single FISH number are adjusted appropriately?

   To be certain that multiple classes taught in one large classroom separated by temporary “walls” are adjusted appropriately, each teacher who is the primary teacher for a group of students should be coded with Scheduling Method “M” (Multiple-Use Classroom or Pod). In this way, all of the students in the “pod” will be added together and then divided by the total number of teachers coded “M.”

2. How does the Scheduling Method code “C” (Co-Teacher) affect the class size calculation?

   If two or more teachers are assigned to a group of students and each teacher is responsible for all students during the entire period indicated on the schedule, then all of the teachers should be coded “C” and the total number of students (unduplicated) will be divided by the number of teachers coded with a “C.”

3. What is the correct way to handle classes to which two different scheduling method codes are applicable? Both of our high schools use block scheduling so their scheduling method is code “B.” They also have JROTC classes which are taught by co-teachers, which is code “C.” What is the correct way to decide which code to use?

   The district should code all of the applicable teachers with scheduling method “C” so that the total number of students in the classroom is divided by the total number of co-teachers. Since code “C” has an arithmetic function in the class size algorithm and code “B” is informational, code “C” takes precedence. For example, all of the JROTC teachers should be coded with scheduling method “C.”

4. Are the students assigned to an “I” (In-Class One-on-One) teacher factored in when calculating class size?

   Yes. In-Class One-on-One students are factored in the class average in that they are divided by both the instructor assigned to those students and the other non “I” instructors assigned to the class.

5. If two teachers are assigned to one classroom, should they both be coded as co-teachers?

   Not necessarily. They should only both be coded as co-teachers if both teachers are responsible for all students.
6. What if two teachers are assigned to one class, but one of them is only responsible for one student or a small group of students in the classroom? Should they both be coded as co-teachers?

The primary teacher should be coded “S” (Self-Contained). The other teacher or teachers should be assigned to the students for whom he or she is responsible and coded “I” (In-Class One-On-One).

7. Should a separate course number be assigned to courses taught by “In-Class One-On-One” teachers?

Course numbers are determined by the student performance standards associated with the course. If the “In-Class One-On-One” teacher is responsible for the same student performance standards as the general education teacher, then both teachers should be assigned the same course number. If the “In-Class One-On-One” teacher is teaching different skills, then the appropriate course number for those performance standards should be assigned.

8. In a support facilitation model classroom in which there is an “S” (Self-Contained teacher) and an Exceptional Student Education (ESE) teacher, should they both be coded “C” (Co-Teacher)?

No. In a support facilitation model classroom, an ESE teacher provides support for ESE students’ achievement. Support facilitators work with the general education teachers and students identified with exceptionalities as needed. In this model, the basic education teacher is coded “S” (Self-Contained) and the ESE teacher is coded “I” (In-Class One-On-One).

9. What is the purpose of data element “Term/Survey Indicator”?

The data element “Term/Survey Indicator” allows districts to indicate which classes actually meet during the state reporting period (FTE survey week) being submitted. In this way, for instance, if districts submit classes meeting during Terms 6 and 7 for funding but only the Term 6 classes are in session during the survey week, these classes should be coded “Y” and the Term 7 classes should be coded “N.”

10. Why does the class size algorithm only average core courses taught on Friday?

Due to the huge volume of data that is necessary to be processed to determine the averages, it was decided to take a snapshot of a representative day of the week. The statistical difference between averages derived from one day and those derived from every school day were not significant enough to justify the investment of time and resources necessary to process the larger sample size.
11. What is the purpose of data element “Day of the Week Scheduled, Alternate Date Certain”? In a few schools in the state, no core courses are taught on Friday, the day used in the class size algorithm. The data element “Day of the Week Scheduled, Alternate Date Certain” was created for districts with entire schools that do not teach core courses on Friday. This data element should be coded “Y” only if an entire school would not be included in the class average calculation because no core courses meet on Friday. In that case, the district should choose another representative day and code “Day of Week Scheduled, Alternate Date Certain” for all courses that meet on that day.

12. If my district or charter school is determined to be noncompliant with class size maximums, are we required to submit a class size compliance plan? Yes. Section 1003.03(4)(e), F.S., requires each district and charter school out of compliance with class size requirements to submit to the Commissioner of Education, by February 1, a plan that describes the specific actions that will be taken to comply fully with class size reduction requirements by October of the following school year. A compliance plan for a traditional public school or district-operated school of choice must be certified by the school board. A charter school’s compliance plan must be certified by the charter school’s board of directors. The certified compliance plan should be emailed to K12Verify@fldoe.org.

NOTE: Charter schools’ calculation for compliance shall be the average at the school level. See Section 1002.33(16)(b)3., F.S.

13. How can I gain access to the Class Size Data Quality Application? Access to the Class Size Data Quality Application is granted by each district’s SSO Administrator. The application provides district users access to class size data for all schools in the district but only provides charter school users access to their charter school’s data. If a district requires assistance with determining their district’s SSO Administrator they should contact K12Verify@fldoe.org.

14. My district or charter school is submitting a class size appeal due to data reporting errors. How can I gain access to the Class Size Appeals Application? Districts may obtain login credentials for the Class Size Appeals Application by emailing K12Verify@fldoe.org. Upon receipt of the district’s email request, a member of the FDOE team will provide the district with the login credentials via phone. The Class Size Appeals Application should only be used to correct data reporting errors. Supporting documentation for the district’s appeal must be uploaded to the FDOE ShareFile folder.
15. How can I gain access to the FDOE ShareFile folder to upload supporting documentation for my class size appeal?

Districts may gain access to the FDOE ShareFile folder by submitting a request for access to K12Verify@fldoe.org. The FDOE ShareFile folder is only used in the class size appeals process to upload supporting documentation for the districts’ appeal. All data reporting errors must be resolved in the Class Size Appeals Application by the appropriate deadline.

16. How can I update the Master School Identification (MSID) file to indicate my school is a School of Excellence school?

The School of Excellence field is “view only” and can only be updated internally by the FDOE. If the district determines this field has been incorrectly designated, please email the district’s concern(s) to ASKEIAS@fldoe.org.

17. How can I update the Master School Identification (MSID) file to indicate a school is a district-operated school of choice?

District-operated schools of choice are determined by the district and indicated by the district on the MSID application submitted to the FDOE Office of PK-12 Education Information Services (EIS). To update this field, please contact EIS at ASKEIAS@fldoe.org.

18. When will the FDOE determine compliance with class size maximums?

Compliance with class size maximums is determined using final Survey 2 data as of December 15 when the survey closes.

19. How can my charter school obtain class size reports?

Charter schools may obtain class size reports generated by the FDOE by requesting the reports from their district’s Management Information Systems (MIS) staff. Also, charter schools may view their class size data by obtaining access to the Class Size Data Quality Application from their district’s SSO Administrator. If the charter school requires assistance with determining the appropriate contact in their district, please contact K12Verify@fldoe.org.
